Computerized Faunal Inventory for the Delaware Estuary and Lake Erie Coastal Zone

Coastal Zone

Funded and Coordinated through
Dept. of Environmental Resources
Office of Resources Management
Bur. of Water Resources Management
Div. of Coastal Zone Management

Wildlife Planning Division
Pennsylvania Game Commission

1988

COMPUTERIZED FAUNAL INVENTORY FOR THE DELAWARE ESTUARY AND LAKE ERIE COASTAL ZONE

Prepared by:

Division of Wildlife Planning
Bureau of Land Management
Pennsylvania Game Commission

January, 1989

The preparation of this report was financed in part through the Pennsylvania Coastal Zone Management Program under revisions of the Coastal Zone Management Act of 1972, administered by the Division of Coastal Zone Management, Bureau of Water Resources Management, Pennsylvania Department of Environmental Resources.

INTRODUCTION

One of the major limiting factors in the analysis of environmental projects is the availability of faunal inventory data for the project area. Ideally, the project manager should know which animal species are present within the project area (at all times of year, not just the present), how many (abundance) of each species are present, the habitats used by each species, and the responses likely elicited by the species (individuals and populations) due to habitat changes on the project site. Many times a plethora of faunal information already is available for a project area, but is widely dispersed in books, filing cabinets, field notebooks, and the minds of professional ecologists and research biologists. Computer technology has made it possible for biologists to summarize data from diffuse sources into an easily accessible database, with the ability subsequently to analyse complex environmental problems for faunal concerns in minutes rather than hours, days, and weeks.

In the early 1980's a group of research biologists with the U.S. Fish and Wildlife Service developed a computerized database of Pennsylvania's faunal resources for use in environmental planning. Management of this database -- the Pennsylvania Fish and Wildlife Data Base -- was transferred to the Pennsylvania Game Commission in 1982.

Data Base Contents

The Pennsylvania Fish and Wildlife Data Base contains complete profiles for 651 resident and common migrant and select invertebrate species occurring within Pennsylvania. The 651 species in the Data Base are represented by nine major animal groups, as follows: amphibians (39), reptiles (36), fishes (171), birds (293), mammals (70), and molluscs (42).

Each species profile in the Data Base was compiled using a standard format containing standard definitions and classifications. The definitions, classifications, and data collection format evolved out of an extensive survey of professional natural resource agencies, universities, and private conservation organizations.

Each species profile contains descriptors defining distribution in Pennsylvania, legal and use status, habitat associations, food habits, environmental associations and requirements, life history, and management practices. All of this information, compiled in the standard coding booklet, was summarized by professionals with sound research backgrounds and expert knowledge of the species or species group. Each species profile was developed from a combination of published reports and field notes, and also includes professional opinion. Each data base entry is fully referenced to the original source documents.

Data Base Management

At the present time two versions of the Pennsylvania Fish and Wildlife Data Base operate - one mainframe and one microcomputer. The mainframe version operates on the Univac computer at Bloomsburg University, Bloomsburg, Pennsylvania, using the MANAGE database management system. The microcomputer version - using Advanced Revelation software -

is being tested and manuals developed for distribution in early 1989. Transition to dedicated micromputer use is expected by October, 1989. Presently, interactive access or batch processing on the mainframe version is possible via telephone with compatible computer hardware.

Data Base Availability

The Pennsylvania Fish and Wildlife Data Base is available to federal and state agencies, universities, conservation organizations, environmental organizations, environmental and engineering consulting firms, and any individual needing fish and wildlife information. Two modes of access are possible; direct interactive access, and over-the-counter service through the Game Commission.

Interactive access is available only to public agencies. All other prospective users must request information through the Game Commission's Data Base Coordinator.

Users of the Data Base have included the U.S. Bureau of Land Management (Eastern States Office), U.S. Office of Surface Mining (Eastern Technical Center), U.S. Army Corps of Engineers (Baltimore, Philadelphia, and Pittsburgh District Offices), U.S. Forest Service (Allegheny National Forest, Northeastern State and Private Forestry, and the Northeastern Forest Experiment Station), U.S. Nuclear Regulatory Commission, U.S. Soil Conservation Service, U.S. Fish and Wildlife Service, Pennsylvania Fish Commission, Pennsylvania Department of Environmental Resources, (Bureau of Water Quality Management, Water Resources Management, Dams and Waterways Management, Information Systems, and Forestry), and numerous environmental/engineering consulting firms.

Applications

Each species profile in the Data Base is divided into 125 separate datafields (e.g., species common-name, or occurrence within a watershed). Literally thousands of combinations, i.e., questions, are answerable given this type of data organization.

The Pennsylvania Fish and Wildlife Data Base will give almost instantaneous answers to questions like the following:

- *What fish and wildlife species are found in Erie County?*
- *What birds and mammals are found in riparian habitats of the Chatauqua-Conneaut drainage of eastern Lake Erie?*
- *What species occurring in the Chatauqua-Conneaut drainage would be adversely affected (or benefited) by channelizing and/or impounding water?*
- *What vertebrate wildlife species in Bucks County require cavities in snags for nesting?*
- *What endangered or threatened species occur in estuarine habitats in Delaware County and what types of activities would adversely affect their survival?*

- *What are the habitat requirements and limiting factors of the federally endangered piping plover?*

Specific applications already noted by Data Base users include:

1. Basic descriptions of individual species, their habitat associations, and life histories.

2. Preparation and review of permit applications for surface mining, power plant siting, point source discharge, solid waste and hazardous waste disposal, and wetland encroachments.

3. Analysis of proposals to designate species water quality classifications for waterways.

4. Evaluation and review of energy development project sites, flood control projects, road construction and improvement projects, bridge replacements, and fly ash disposal sites.

5. Preparation and review of environmental assessments and impact statements (fish and wildlife section).

6. Preparation of wildlife research proposals.

7. Guilding species for habitat evaluation procedures and the construction of species models.

8. Analysis of habitat specific wildlife trends in Pennsylvania.

9. Information source for biological technical training and public information requests.

Updating

The Pennsylvania Fish and Wildlife Data Base, like any other data source, remains valuable only as long as the information obtained is current and meets the expressed needs of the end-user. Information must be updated periodically, incorporating new research findings and new information elements required by users to maintain value and integrity. Through an extensive review of the present Data Base elements and capabilities with Data Base users, several new elements or categories of information (e.g., life history - behavior, reproduction, population dynamics, and limiting factors) and new element values had been identified for inclusion in the Data Base. Additionally, evaluators emphasized the need to review and incorporate new information on species distribution and life history reported in ecological publications.

PROJECT OBJECTIVE

The objective of this research was to update select coastal zone dwelling species in the Pennsylvania Fish and Wildlife Data Base by summarizing the best available information and adding it to existing and new data categories in the Data Base; that is, by compiling data on animal species seasonal distribution, forest-habitat relationships, environmental associations and preferences, food habits, life history, HEP/PAM-HEP model

data, and additional management practices and effects. This effort consisted of a comprehensive survey of existing literature and records, without further field investigation, i.e., a summary of our state-of-knowledge. This information was entered into the Data Base and stored in key-word searchable fashion to facilitate data retrieval and analysis.

Updated faunal data stored and retrieved in the Data Base from this project may be readily obtained to advance Coastal Zone Management program goals requiring the consideration of wildlife resources, including port projects in lakefront areas, public access projects along the coastal zone, coastal zone comprehensive plan updates, and educational programs informing the public of the value of coastal zone areas.

METHODS

Species to be updated were identified by geographic location (Erie and Delaware Estuary Coastal Zone Areas), and habitats (e.g., lacustrine littoral systems with cobble/gravel beaches) occurring within the areas. Emphasis was placed on species that breed, over-winter, and use adjacent habitats for a significant purpose. The 132 species selected for the project are identified in Figures 1 through 6.

Figure 1. Birds included in the computerized faunal inventory for the Lake Erie and Delaware Estuary Coastal Zones.

Common Name	Scientific Name
Blackbird, red-winged	*Agelaius phoeniceus*
Blackbird, rusty	*Euphagus carolinus*
Brant	*Branta bernicula*
Canvasback	*Aythya valisineria*
Cardinal, northern	*Cardinalis cardinalis*
Catbird, gray	*Dumetella carolinensis*
Crow, fish	*Corvus ossifragus*
Dove, mourning	*Zenaide macroura*
Duck, ruddy	*Oxyura jamaicensis*
Duck, wood	*Aix sponsa*
Egret, cattle	*Bubulcus ibis*
Egret, great	*Casherodius albus*
Egret, snowy	*Leucophoyx thula*
Flycatcher, willow	*Empidonax traillii*
Gnatcatcher, blue-gray	*Polioptila caerulea*
Goose, Canada	*Branta canadensis*
Goose, snow	*Chen hyperborea*
Grackle, common	*Quiscalus quiscula*
Grebe, horned	*Podiceps auritus*
Grebe, pied-billed	*Podilymbus podiceps*
Grebe, red-necked	*Podiceps grisegena*
Heron, black-crowned night	*Nycticorax nycticorax*
Heron, green-backed	*Butorides virescens*
Heron, yellow-crowned night	*Nyctanassa violacea*
Ibis, glossy	*Plegadis falcinellus*
Killdeer	*Charadrius vociferus*
Kingbird, eastern	*Tyrannus tyrannus*
Loon, common	*Gavia immer*
Mallard	*Anas platyrhynchos*
Merganser, common	*Mergus merganser*
Merganser, hooded	*Mergus cucullatus*
Moorhen, common gallinule	*Gallinula chloropus*
Oldsquaw	*Clangula hyemalis*
Owl, snowy	*Nyctea scandiaca*
Phalarope, Wilson's	*Phalaropus tricolor*
Pipit, water	*Anthus spinoletta*
Plover, black-bellied	*Pluvialis squatarola*
Plover, semi-palmated	*Charadrius semipalmatus*
Rail, king	*Rallus elegans*
Rail, Virginia	*Rallus limicola*
Rail, yellow	*Coturnicops noveboracensis*
Sandpiper, buff-breasted	*Tryngites subruficallis*
Sandpiper, least	*Calidris minutilla*
Sandpiper, pectoral	*Calidris melanotos*
Sandpiper, solitary	*Tringa solitaria*
Sandpiper, spotted	*Actitis macularia*
Scaup, greater	*Aythya marila*
Scaup, lesser	*Aythya affinis*
Scoter, white-winged	*Millanita fusca*
Shoveler, northern	*Anas clypeata*

Sora	*Porzana carolina*
Sparrow, Savannah	*Passerculus sandwichensis*
Sparrow, swamp	*Melospiza georgiana*
Swallow, barn	*Hirundo rustica*
Swallow, cliff	*Petrochelidon pyrrhonota*
Swan, tundra	*Olor columbianus*
Swan, mute	*Cyonus olor*
Teal, blue-winged	*Anas discors*
Teal, green-winged	*Anas crecca*
Tern, black	*Chlidonias niger*
Tern, caspian	*Sterna caspia*
Tern, least	*Sterna albifrons*
Turnstone, ruddy	*Arenaria interpres*
Vireo, white-eyed	*Vireo griseus*
Warbler, prothonotary	*Protonotaria citrea*
Widgeon, American	*Anas americana*
Widgeon, Eurasian	*Anas penelope*
Wren, sedge	*Cistothorus platensis*

Figure 2. Mammals included in the computerized faunal inventory for the Lake Erie and Delaware Estuary Coastal Zones.

Common Name	*Scientific Name*
Bat, big brown	*Eptesicus fuscus*
Chipmunk	*Tamias striatus*
Cottontail, eastern	*Sylvilagus floridanus*
Fox, gray	*Urocyon cinereoargenteus*
Fox, red	*Vulpes vulpes*
Mole, eastern	*Scalopus aquaticus*
Mouse, house	*Mus muscalus*
Mouse, white-footed	*Peromyscus leucopus*
Rat, Norway	*Rattus norvegicus*
Skunk, striped	*Memphitis mephitis*
Squirrel, gray	*Sciurus carolinensis*
Vole, pine woodland	*Microtus pinetorum*

Figure 3. Amphibians included in the computerized faunal inventory for the Lake Erie and Delaware Estuary Coastal Zones.

Common Name	*Scientific Name*
Frog, bull	*Rana catesbeiana*
Frog, New Jersey chorus	*Pseudacris triseriata kalmi*
Frog, northern cricket	*Acris c. crepitans*
Hellbender, eastern	*Cryptobranchus a. alleganiensis*
Mudpuppy	*Necturus m. maculosus*
Peeper, northern spring	*Hyla c. crucifer*
Salamander, longtail	*Eurycea l. longicauda*

Figure 4. Fishes included in the computerized faunal inventory for the Lake Erie and Delaware Estuary Coastal Zones.

Common Name	Scientific Name
Alewife	*Alosa pseudoharengus*
Bass, rock	*Ambloplites rupestris*
Bass, smallmouth	*Micropterus dolomieui*
Bass, striped	*Morone saxatilis*
Bass, white	*Morone chrysops*
Bluegill	*Lepomis macrochirus*
Bullhead, brown	*Ictalurus nebulosus*
Bullhead, yellow	*Ictalurus natalis*
Carp, common	*Cyprinus carpio*
Catfish, channel	*Italurus punctatus*
Catfish, white	*Ictalurus catus*
Chub, hornyhead	*Nocomis biquttatus*
Chub, silver	*Hybopis storeriana*
Chubsucker, creek	*Erimyzon oblongus*
Crappie, black	*Pomoxis nigromaculatus*
Dace, blacknose	*Rhinichthys atratulus*
Dace, longnose	*Rhinichthys cataractae*
Darter, channel	*Percina copelandi*
Darter, tessellated	*Estheostoma olmstedi*
Madtom, margined	*Noturus insignis*
Minnow, silvery	*Hybognathus nuchalis*
Minnow, bluntnose	*Pimephales notatus*
Minnow, fathead	*Pimephales promelas*
Mummichog	*Fundulus heteroclitus*
Perch, white	*Morone americana*
Pickerel, chain	*Esox niger*
Pickerel, redfin	*Esox americanus americanus*
Pike, blue	*Stizostedion vitreum glaucum*
Redhorse, golden	*Moxostoma erythrurum*
Redhorse, shorthead	*Moxostoma macrolepidotum*
Salmon, chinook	*Oncorhynchus tshawytscha*
Salmon, coho	*Oncorhynchus kisutch*
Shad, American	*Alosa sapidissima*
Shiner, emerald	*Notropis atherinoides*
Shiner, common	*Notropis cornutus*
Shiner, mimic	*Notropis volucellus*
Shiner, redfin	*Notropis umbratilis*
Shiner, rosyface	*Notropis rubellus*
Shiner, spotfin	*Notropis spilopterus*
Shiner, spottail	*Notropis hudsonius*
Shiner, swallowtail	*Notropis procne*
Stickleback, fourspine	*Apeltes quadracus*
Stickleback, threespine	*Gasterosteus aculeatus*
Stonecat	*Noturus flavus*

Figure 4. Fishes included in the computerized faunal inventory for the Lake Erie and Delaware Estuary Coastal Zones.

Sturgeon, lake	*Acipenser fulvescens*
Sucker, northern hog	*Hypentelium nigricans*
Sunfish, banded	*Enneacanthus obesus*
Sunfish, blue-spotted	*Enneacanthus gloriosus*
Sunfish, green	*Lepomis cyanellus*
Sunfish, redbreast	*Lepomis auritus*
Walleye	*Stizostedion v. vitreum*
Warmouth	*Lepomis gulosus*
Whitefish, lake	*Coregonus clupeaformis*

Figure 5. Reptiles included in the computerized faunal inventory for the Lake Erie and Delaware Estuary Coastal Zones.

Common Name	*Scientific Name*
Snake, eastern ribbon	*Thamnophis s. sauritus*
Snake, shorthead garter	*Thamnophis brachystoma*
Turtle, wood	*Clemmys insculpta*

Figure 6. Molluscs included in the computerized faunal inventory for the Lake Erie and Delaware Estuary Coastal Zones.

Common Name	Scientific Name
Pigtoe, round	Pleurobema sintoxia
Pocketbook, tidewater	Leptodea ochracea
Shell, Fisher's purple	Elliptio fisheriana
Shell, northern lamp	Pleurobema clava
Shell, painted riffle	Epioblasma triquetra
	Campeloma decisum
	Helisoma trivolvis
	Physa heterostropha

T.ENVIRON	TRANSLATION OF THE ENVIRON CODE FIELD.
T.NWICLS	TRANSLATION FO THE ENVIRON CODE FIELD.
SPECIES.ID	SPECIES IDENTIFICATION KEY
CAT	THE CATEGORY CODE FROM THE BOVA SPECIES LIST.
NAME	THE COMMON NAME OF THE SPECIES AS LISTED BY THE APPROPRIATE REFERENCE AND THE BOVA SPECIES RECORD.
PHYLUM	THE NAME OF THE PHYLUM THE SPECIES IS IN WHICH THE SPECIES HAS BEEN CATEGORIZED.
SUBPHYLUM	THE SUBPHYLUM FOR A GIVEN SPECIES.
CLASS	THE CLASS DESIGNATION FOR THE SPECIES.
SUBCLASS	SUBCLASS OF SPECIES.
ORDER	ORDER OF SPECIES.

Figure 7. Fieldnames and definitions of data categories defined in the Pennsylvania Fish and Wildlife Data Base.

FIELDNAME	DESCRIPTION
SUBORDER	SUBORDER OF SPECIES.
FAMILY	FAMILY OF SPECIES.
SUBFAMILY	SUBFAMILY OF SPECIES.
GENUS	GENUS OF SPECIES.
SUBGENUS	THE SUBGENUS OF SPECIES.
SPECIES	SELF-EXPLANATORY
SSP	SUB-SPECIES
AUTHORITY	TAXONOMIC AUTHORITY FOR THE SPECIES TAXONOMIC CATEGORIZATION.
R.TAXONOMY	THE REFERENCE(S) USED TO COMPLETE THE FIELDS DESCRIBING THE TAXONOMY OF THE SPECIES.
C.TAXONOMY	COMMENTS CONCERNING THE TAXONOMIC DESCRIPTION
STATUS	THE STATUS CODES WHICH DESCRIBE THE LEGAL, ECONOMIC, OR ECOLOGICAL STATUS OF THE SPECIES IN THE COMMONWEALTH.
R.STATUS	THE REFERENCES USED TO COMPLETE THE STATUS INFORMATION FOR THE SPECIES.
C.STATUS	COMMENTS REFERRING TO THE STATUS.
OCCUR.COUNTY	A LIST OF FIPS CODE FOR COUNTIES WHERE SPECIES OCCUR.
ABS.COUNTY	A LIST OF FIPS CODES FOR COUNTIES WHERE SPECIES IS KNOWN TO BE ABSENT.
UNK.COUNTY	A LIST OF FIPS CODES FOR COUNTIES WHERE THE SPECIES IS UNKNOWN TO OCCUR.
SEAS.OCCUR	SEASONAL OCCURRENCE CODES IN DISTRIBUTION SECTION.
ABUND.CTY	COUNTY ABUNDANCE CODES IN RELATION TO SEASONAL OCCURRENCE.
HYDRO.CODE	OWDC HYDROLOGIC UNIT CODES IN RELATION TO SEASONAL OCCURRENCE.
QUAD.CODE	7.5' QUADRANGLE OCCURRENCE.
LATLONG	LATITUDE/LONGITUDE POINT FOR HIGH VALUE SPECIES DISTRIBUTION.

Figure 7. Fieldnames and definitions of data categories defined in the Pennsylvania Fish and Wildlife Data Base.

Fieldname	Description
R.HABITAT	REFERENCED USED TO DOCUMENT THE HABITAT FIELD.
RIPARIAN	DESIGNATE THE SPECIES AS OCCURRING IN RIPARIAN HABITATS.
R.RIPARIAN	RIPARIAN REFERENCES.
FSIZE	FOREST SIZE CLASS.
R.FSIZE	FOREST SIZE REFERENCES.
SAF.TYPE	SAF FOREST COVER TYPES (WITH VARIANTS).
STAGE	THE STAGE MODIFIER FOR SAF FOREST COVER TYPE.
CLOS	CANOPY CLOSURE.
R.SAF.TYPE	REFERENCES FOR SAF FOREST COVER TYPES.
LAND.USE	LANDUSE/LANDCOVER CLASSIFICATION THAT SPECIES IS ASSOCIATED WITH.
R.LAND.USE	LAND USE REFERENCES.
NWI	SYSTEM/SUBSYSTEM INFORMATION THAT THE SPECIES IS KNOWN TO BE ASSOCIATED WITH.
NWICLS	CLASS/SUBCLASS INFORMATION MODIFYING THE NWI FIELD.
R.NWI	THE REFERENCES USE TO DOCUMENT THE INFORMAITON IN THE NWI FIELD.
C.HAB.ASSOC	COMMENTS REGARDING SPECIES HABITAT.
ANIMAL.PLANT	LIST OF SYMBIOTIC AND OTHER PLANT/ANIMAL ASSOC.
R.ANIMAL.PLANT	ANIMAL/PLANT REFERENCES.
C.ANIMAL.PLANT	COMMENTS ON ANIMAL/PLANT RELATIONSHIPS.
HAB.INTERRELN	INFORMATION ASSOCIATING SPECIES WITH HABITAT, SEASON, FUNCTION, RELATIVE VALUE, AND OTHER FEATURES.
R.HAB.INTERRELN	REFERENCES FOR HABITAT INTERRELATIONSHIP.
HIGH.HABITAT	HIGH HABITATS REQUIRED FOR COMPLETION OF SPECIES LIFE CYCLE.
R.HIGH.HABITAT	HIGH HABITAT REFERENCES.
C.HIGH.HABITAT	COMMENTS REGARDING HIGH HABITAT INFORMATION.

Figure 7. Fieldnames and definitions of data categories defined in the Pennsylvania Fish and Wildlife Data Base.

Fieldname	DESCRIPTION
HEP	Information for calculating habitat suitability indices (HSI) using habitat evaluation.
HSI	Information for calculating habitat suitability indices using habitat evaluation.
R.HEP	REFERENCES USED TO DOCUMENT THE INFORMATION IN THE HEP FIELD.
C.HEP	COMMENTS ON HEP INFORMATION.
TROPHIC	TROPHIC LEVEL THAT BEST DESCRIBES GENERAL FOOD HABITS OF SPECIES.
R.TROPHIC	REFERENCES USED TO DOCUMENT THE INFORMATION IN THE TROPHIC FIELD.
F.LIFESTAGE	LIFESTAGE FOR FOOD HABITS.
FOOD	THE SPECIFIC FOOD ITEM CONSUMED BY SPECIES.
FPART	THE SPECIFIC PART OF OF FOOD ITEM CONSUMED BY SPECIES.
R.FOOD.G	REFERENCES USED TO DOCUMENT THE INFORMATION FOR THE GENERAL FOOD HABITS OF THE SPECIES.
R.FOOD.I	REFERENCES USED TO DOCUMENT THE INFORMATION IN THE IMPORTANT FOOD HABITATS OF THE SPECIES.
C.FOOD	COMMENTS FOR THE GENERAL AND IMPORTANT FOOD HABITS OF SPECIES.
R.FOOD.L	REFERENCES USED TO DOCUMENT THE INFORMATION IN THE LARVAL FOOD HABITATS OF THE SPECIES.
C.FOOD.L	COMMENTS REGARDING THE LARVAL FOOD HABITATS OF THE SPECIES.
R.FOOD.J	REFERENCES USED TO DOCUMENT THE JUVENILE FOOD HABITATS OF THE SPECIES.
C.FOOD.J	COMMENTS ON THE JUVENILE FOOD HABITATS OF THE SPECIES.
R.FOOD.A	REFERENCES USED TO DOCUMENT THE ADULT FOOD HABITATS OF THE SPECIES.
C.FOOD.A	COMMENTS REGARDING THE ADULT FOOD HABITATS OF THE SPECIES.
ELIFESTAGE	THE LIFESTAGE FOR THE SPECIFIC ENVIRONMENTAL ASSOCIATIONS OF THE SPECIES.

Figure 7. Fieldnames and definitions of data categories defined in the Pennsylvania Fish and Wildlife Data Base.

FIELDNAME	DESCRIPTION
ENVIRON	THE SPECIFIC ENVIRONMENTAL ASSOCIATIONS OF THE SPECIES LIFE STAGE.

DATE.OUT	WORKBOOK TRACKING SYSTEM.
EDITOR	"
DATE.IN	"
R.ENVIRON.L	CONTAINS REFERENCE NUMBERS FOR THE LARVAL STAGE ENVIRON CODES.

Information from existing literature sources and agency records were obtained to facilitate data summary, and computerized literature surveys (e.g., DIALOG) were completed by Game Commission (PGC) staff. At the same time, consulting biologists were contracted with via Commonwealth competitive contracting procedures to review, critique, and summarize the available species information in the standard Species Workbook format. See Appendix A for a list of subcontractors.

Species Workbooks were reviewed and corrected as needed by PGC staff in Harrisburg. Species Workbook contents were entered into the Data Base, reviewed, and edited as necessary to compile a revised species record.

Description of Species Profile Contents

Species descriptions were compiled by species experts using the standard format, the Pennsylvania Fish and Wildlife Data Base Species Workbook. Appendix B contains a sample. This workbook provides a standard format for species profiles in ten information categories:

1. Taxonomy

Standard, generally accepted, taxonomic references are used to enter common and scientific names, and a complete taxonomic profile from phylum to subspecies. Also included is a narrative discussion of the species taxonomy, and commonly used scientific and common name synonyms that permit greater search efficiency.

2. Status

The status category allows for a description of the species current legal and use status within the Commonwealth and the identification of regulatory authorities. Status types are identified to facilitate locating federal/state endangered/threatened/vulnerable species, as well as a variety of other categories.

3. Distribution

Species distribution within Pennsylvania is discussed narratively and fully referenced. Distribution is coded into separate searchable fields by county using Federal Information Processing Standard (FIPS) codes; 7 1/2' quadrangles; U.S. Geological Survey, Office of Water Data Coordination (OWDC) Hydrologic Units; Bailey's Ecoregion Classification; Kuchler's Potential Natural Vegetation; and, for special status species, latitude/longitude of specific point and areal locations. Also included is species seasonal occurrence within each county and relative abundance by county.

4. *Habitat Associations*

Species - habitat associations are described narratively as discussed in the reviewed literature and using a series of standard habitat surrogates commonly used for habitat inventory and environmental review. Habitat associations used include the U.S. Geological Survey's Land Use and Land Cover Classification system; the U.S. Forest Service's Forest Inventory Classes and Timber Size Classes; and the U.S. Fish and Wildlife Service's National Wetland Inventory Classification System. Additionally, environmental (physical, biological, and ecological) associations and requirements were recorded for each species by life stage.

5. *Habitat Evaluation Procedures Models*

If final or draft habitat evaluation models were available for a species, this was recorded and the model type identified. Habitats and model elements are listed as well.

6. *Animal and Plant Associations*

Important animal and/or plant associations, e.g., commensalism, are described in this section.

7. *Food Habits*

Species food habits are described narratively and using a standard set of food resources. Foods consumed by each life stage (e.g., juvenile) are recorded separately.

8. *Life History*

A complete narrative profile of the species life history is compiled in six separate sections: physical description, origin within Pennsylvania, behavior, reproduction, population dynamics, and limiting factors. Select life history paramaters were recorded into 22 separate searchable fields.

9. *Management*

Management activities that affect the species survival and population levels either positively or negatively are narratively described and recorded using a standard set of management practices.

10. *References*

All the literature sources and other information sources referenced in compiling the previous nine sections are compiled in this category.

DATA BASE FORMAT

The revised format for the Pennsylvania Fish and Wildlife Data Base includes 169 separate fields of information for each species (Figure 7). Data from each completed Species Workbook are inserted into the Data Base in the designated fields.

Printouts or listings of species accounts before and after updating completed during this study provide an excellent illustration of the additional fields of information included in updating and additional values in existing data fields. Printouts of the Sedge wren prior to updating (Appendix D) and after updating (Appendix E) are provided for comparative purposes. A field-by-field comparison of these two printouts will highlight the new data fields for each species account, including the expanded narrative discussions and the additional values added in pre-existing fields.

In addition to the Sedge wren displayed in Appendices D and E, the following updated species accounts are provided as representative examples of the nature and extent of information generated by this project:

Appendix A. List of subcontractors used in compiling the computerized bird and mammal inventory for the Lake Erie Coastal Zone.

ACKNOWLEDGMENTS

This Species Workbook and the resulting Pennsylvania Fish and Wildlife Data Base are the result of a continuing effort over several years by many individuals and agencies to provide readily accessible species information for use in natural resource planning and management. Agencies that have contributed to this project over the many years include the U.S. Fish and Wildlife Service, U.S. Bureau of Land Management, U.S. Army Corps of Engineers, U.S. Office of Surface Mining, U.S. Soil Conservation Service, U.S. Forest Service, U.S. Nuclear Regulatory Commission, Pennsylvania Department of Environmental Resources, Pennsylvania Fish Commission, Missouri Department of Conservation, Colorado Division of Wildlife, Illinois Department of Conservation, Virginia Commission of Game and Inland Fisheries, and the Western Pennsylvania Conservancy.

Special thanks are due many for their support in this program and development of the workbook. In particular, I would like to recognize and thank for their assistance and helpful comments: Charles Cushwa, Gene Ludlow, Henry Gerke, James Brown, Glenn Gravatt, David Putnam, Jerry Touval, David Reese, John Forren, Richard Heaslip, Stephen Miller, Robert Brooks, Joseph Barnard, Richard Roth, Edwin Pentecost, Germain LaRoche, Daniel Devlin, Richard Croop, Ken Hickok, Paul Steblein, Jerry Hassinger, John Kriz, Bill Palmer, Bill Shope, Calvin Butchkoski, Jerry Wunz, Arnie Hayden, Fred Hartman, John Dunn, Gregory Grabowicz, John Byerly, Frank Mazzotti, and Bruce Anderson.

Special recognition and thanks are due to Arlene Miller and Joan Mehaffey for their patience, perserverance, and typing and editorial skills that permitted completion of this workbook.

PENNSYLVANIA
FISH AND WILDLIFE
DATA BASE

SPECIES WORKBOOK

Table of Contents

GENERAL INSTRUCTIONS

This Species Workbook has been developed to compile information in a standard format for the Pennsylvania Fish and Wildlife Data Base. The Data Base is a computerized library of species information that is keyword searchable, providing instant access to information for 840+ animals occurring in Pennsylvania. The Data Base provides an important focus for storing and acces sing animal for Pennsylvania species. Game Commission personnel and others use this Data Base for environmental assessments, habitat evaluation and management, species management research, wildlife extension, and education.

This workbook has been designed for compiling a complete, concise profile of the distribution, status, biology, and management of the species. You will find several "narrative" and "checklist" sections in this workbook, with specific instructions accompanying each section. Most of the reference materials required to complete a section have been incorporated into the instructions and checklists. Additional materials or references that might be required to correctly complete a section, but were too voluminous or inappropriate to include in the workbook, are included in the Species Workbook Supplemental Manual.

Some of the information requested in sections of the workbook will appear to be duplicated; therefore, it is important to understand the different functions of the narrative sections and checklists.

Narratives

The narratives should be written in a flowing, readable format. They should provide quick, fully referenced, documentation to the Data Base user for environmental assessments, planning decisions, etc. The narratives should be written to stand alone; that is, even if the information is requested again in a summary checklist, it is essential that all relevant/appropriate information for the topic be included in the narrative text. An individual retrieving narrative information from the Data Base probably will not have viewed any of the checklist information.

All information presented in these narratives must be referenced. Assign each reference a numerical code (sequentially beginning with Ø1, based upon order of appearance in the text); then record the complete citation in the REFERENCE section of this workbook. Use these codes along with the page numbers in the citation throughout the narratives to indicate the sources for each item of information; e.g., this species deposits eggs in warm, well-drained, sandy soils (Ø3:14, 14:35Ø-353, 15:4-5).

When completing the narratives (and other sections requesting text), it is preferred that the information first be drafted and then typed or neatly printed in the workbook. Slash all zeros ("Ø") to prevent confusion with the letter "O". These steps will greatly decrease the incidence of keypunch errors when the information is entered into the computer.

Summary Checklists

The checklists are designed to summarize selected information in the narratives into standardized keywords to allow rapid retrievals from the Data Base. Many of the checklist codes/words are established standards used by other agencies. By using these standards, the checklists will permit specific retrievals from the Data Base; e.g., what species occur in palustrine wetlands? These standard keywords also are useful for crosswalking to other existing databases or mapping systems and for regional/national summaries.

Use your professional judgment to resolve cases in which there may be overlap or gray areas in the checklists. If a species relationship to a standard code/word is uncertain, it is better to indicate a positive connection rather than not indicate it and not be able to retrieve the species in situations involving that code/word. Remember, the narratives will always serve as the definitive source for describing the species.

TAXONOMY

A. Taxonomic Nomenclature

Note: If this Workbook is being used to describe more than one subspecies, indicate all subspecies being described in the Taxonomic Narrative section. Complete the taxonomic description below to the species level only and enter the taxonomic authority for species.

Group (check only one):
__ Amphibian
__ Bird
__ Crustacean
__ Fish
__ Insect - Aquatic
__ Insect - Terrestrial
__ Mammal
__ Mollusc
__ Other Aquatic Invertebrate (not insect)
__ Other Terrestrial Invertebrate (not insect)
__ Reptile

Phylum: _____

Subphylum: _____

Class: _____

Subclass: _____

Order: _____

Suborder: _____

Superfamily: _____

Family: _____

Subfamily: _____

Tribe: _____

Genus: _____

Subgenus: _____

Species: _____

Subspecies: _____

Taxonomic Authority and Date (for Species/Subspecies): _____

_____

B. Taxonomic Narrative

Briefly discuss any variations or disagreements on species identification, classification, and/or nomenclature. Identify any common synonyms for both common and scientific names found in the literature (past or present) or in use in other databases or by other administrative agencies. Additionally, identify type specimens and/or references to descriptions, photographs, drawings, or collections which may be useful for species identification. For all information provided in the narrative, provide reference codes identifying the information source and source page(s) within the text (e.g. Ø3:438-44Ø) and record the complete citation in the REFERENCE section at the back of this workbook.

C. Taxonomic Synonyms

Sequentially list (one per line) all other nomenclature variations and common names used for this species and reported in the Taxonomic Narrative.

Other Scientific Names (Genus, species, subspecies):

Other Common Names:

D. References for Taxonomy [enter the reference codes for all references used in compiling the entries in this section, separate each reference code with a comma]:

STATUS

A. Status Narrative

Develop a narrative profile describing the current legal and use status of this species in the Commonwealth of Pennyslvania. If the species is recognized as endangered, threatened, or a species of special concern, indicate the reasons for the special status and factors that may be threatening to populations of the species. For federally listed species, include the date of listing, whether or not a federal recovery plan exists, and where designated critical habitats have been identified in Pennsylvania. Also, indicate all federal and state agencies that have executive, legislative, or other designated responsibilities for this species and describe the nature of this responsibility following the agency name. Provide appropriate reference codes including page number(s) for all information, and record the complete citation in the REFERENCE section at the back of this workbook.

Note: In developing this narrative, it may be helpful to be aware of the status categories that are included in the checklist that follows.

B. References for Status (enter the reference codes for all references used in compiling the entries in this section, separate each reference code with a comma):

_____

_____

_____

C. Status Checklist

Check all the status categories that apply to the species.

Code	Status	Definition
__ F-E	Federal Endangered	Species is officially classified by the Federal Government as being in danger of extinction throughout all or a significant part of its range. (Consult the Federal Register listing in the Species Workbook Supplemental Manual.)
__ F-T	Federal Threatened	Species is officially classified by the Federal Government as being likely to become endangered within the foreseeable future throughout all or a significant part of its range. (Consult the Federal Register listing in the Species Workbook Supplemental Manual.)
__ F-P	Federal Proposed	Species is officially identified by the Federal Government as being likely to become endangered or threatened and has been proposed for listing. (Consult the Federal Register listings in the Species Workbook Supplemental Manual.)
__ F-C	Federal Candidate	Species is offically identified by the Federal Government as under review or consideration for listin as an endangered or threatened species. (Consult the Federal Register listings in the Species Workbook Supplemental Manual.)
__ S-E	State Endangered	Species is officially classified by the responsible State Government agency (Game Commission or Fish Commission) as endangered.
__ S-T	State Threatened	Species is officially classified by the responsible State Government agency (Game Commission or Fish Commission) as threatened.

Code	Status	Definition
__ S-SC	State Special Concern Species	Species is officially classified by the responsible State Government agency (Game Commission or Fish Commission) as a species of special concern.
__ S-SU	State Status Undetermined	Species is officially recognized by the responsible State Government agency (Game Commission or Fish Commission) as status undetermined or status indeterminate.
__ S-X	State Extirpated	Species is officially classified by the responsible State Government agency (Game Commission or Fish Commission) as extirpated. These generally include species that have disappeared from Pennsylvania, but still exist elsewhere. For birds, includes species that do not presently nest in Pennsylvania, but did at one time.
__ MIGRATORY	Federal Migratory	Species is officially recognized by the Federal Government as a migratory bird in 50 CFR. (Consult the Species Workbook Supplemental Manual for a complete listing.)
__ COMMERCIAL	Commercial	Species is commercially harvested for fur or flesh value.
__ CONSUMP-REC	Consumptive Recreational	Species is harvested recreationally for fur, flesh, or trophy value and its defined as such by State or Federal Law; may be officially classified as "protected", "nongame", or "wild" animal.
__ NON-CONSUMP-REC	Non-consumptive Recreational	Species is not defined by State or Federal law as a species to be harvested recreationally; may be officially classified as "protected", "nongame", or "wild" animal.
__ INDICATOR	Biological Indicator	Species whose occurrence indicates environmental quality (e.g., presence indicates low levels of dissolved oxygen).
__ SENSITIVE	Sensitive	Species especially susceptible to environmental perturbation (e.g., raptor breeding success has been closely tied to pesticide application and exposure).
__ UNCLASSIFIED	Unclassified	Species has no recognized status in the Commonwealth of Pennsylvania or its status does not correspond to any of the above categories.

SPECIES DISTRIBUTION

The following sections have been designed to record the species distribution in the Commonwealth of Pennsylvania. First, the species distribution should be described in "narrative" form. Each item of information presented in this narrative should be referenced in the Narrative Reference section. After the narrative is completed, this information can then be used to fill out the remaining distribution sections [County distribution, distribution by watershed (OWDC Hydrologic Units), 1:24,000 scale USGS maps, latitude/longitude point locations, etc.].

Consider and use the following DEFINITIONS in completing the distribution section of this workbook:

Occurrence - a species occurs in an area if it breeds, winters, or significantly uses habitat in that area. A species would occur in an area if the animal occurs there sometime during the year and the presence of that area served some vital or essential role in the animal's life cycle (even though habitat utilization may not be considered great). When defining the species occurrence, remember that you are specifying those areas in which the species will be considered in environmental studies, research project planning, management planning, etc.

The following values will be used in recording species occurrence geographically in the Commonwealth: known to occur, known not to occur, occurrence is unknown. Use the following guideline and definitions to interpret reports and other data sources for recording species distribution and occurrence:

Known to occur: a species has "known" occurrence in an area if there exists recorded sightings, specimen data, and documentation/evidence that suggest occurrence (e.g., sightings in an area of previously documented ocurrence), or documentation/evidence judged by professional, expert opinion to be valid. Range maps might, but do not necessarily, qualify or meet these criteria. Occurrence must qualify as defined above.

Known not to occur: a species is "known not to occur" in an area, i.e., area is outside the range of the species distribution. This value only applies for County Distribution.

Unknown: a species occurrence in the area is unknown, i.e., unable to determine from the available information base or from expert opinion whether species occurrence is "known" in an area or whether the species is "known not to occur" in an area.

A. Distribution Narrative

The Distribution Narrative section is provided for compiling a complete profile of the species distribution within Pennyslvania. The schematic below is provided for mapping the species distribution.

This narrative will provide the core or base for data recorded in subsequent distribution sections and the database. Individuals accessing the database should find in this narrative a complete and concise description of known locations of the species and/or populations of the species, and be able to discern breeding locations, wintering locations, and areas of migratory occurrences.

In the first paragraph, provide a brief description of the species current and historic distribution in the Commonwealth. (This paragraph should be brief and concise, not exceeding 3-4 sentences or 10 lines of text.) In the next paragraphs, highlight areas of year-round occurrence, seasonal occurrence, and migratory occurrence. If the species is migratory only in Pennsylvania, indicate the general migratory movement pattern (e.g. by major water drainage or mountain chain) and general dates of movement.

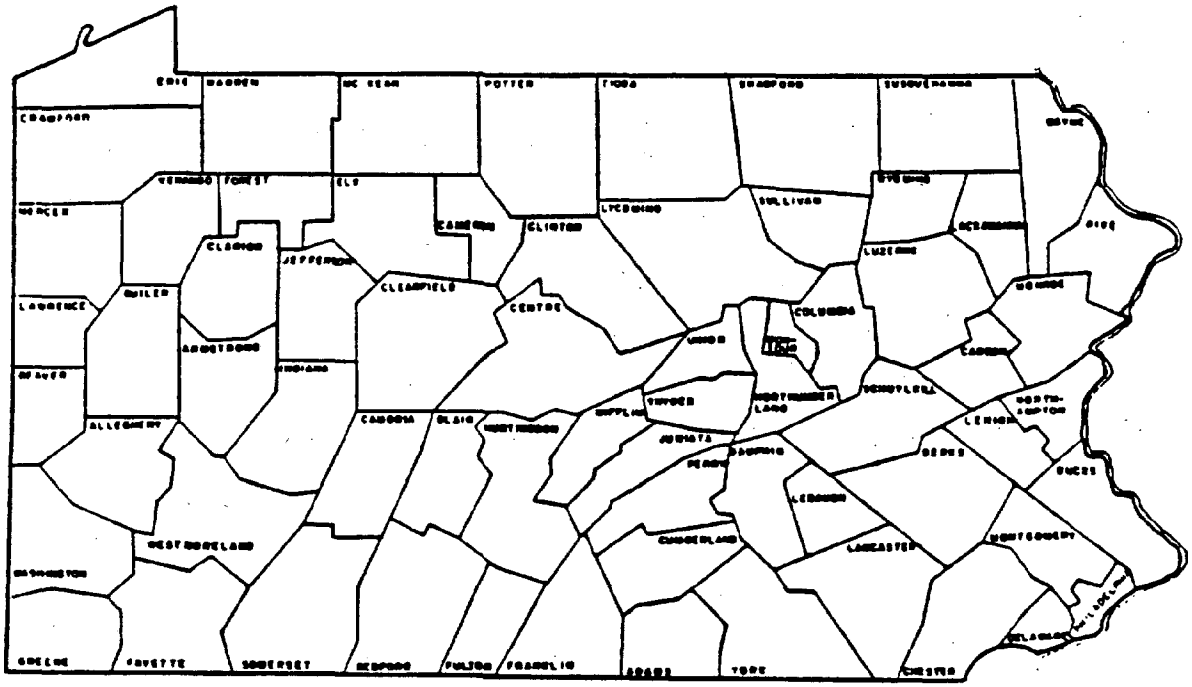
When describing the species distribution in these paragraphs, first indicate the general area of occurrences (region, county, watershed, national forest, game lands, state park/forest, etc.), then record information (if feasible) on site locations using reference points such as cities, roads/mileposts, topographic features/elevations, rivers/streams/reservoirs, quads, latitude/longitude, UTM coordinates, etc.

Be sure that possible occurrence (speculation and professional opinion) is noted as such, and that the occurrence type or mode is indicated (i.e., breeds in the following locations: . . .; winters in the following locations: . . ., etc.). Information related to relative abundance might also be included when available.

If precise distribution is considered too sensitive or secure to present in this workbook and the database give the name, title, affiliation, address, and business telephone number of the person(s) maintaining this information. Make certain that the individual(s) is consulted prior to providing the information.

Be certain to follow each item of distribution information with the reference code indicating the source of information, e.g., "known to occur in southeastern Pennsylvania in the counties of Chester, Delaware, and Berks (Ø3:21, Ø5:14-16, 11:14Ø)." Note that persons providing expert opinion/interpretation are considered a reference and should be assigned a reference code and cited in the REFERENCE section at the back of this workbook.

Map the species distribution below and narratively describe the distribution as instructed above in the space provided below and on the following pages.



Area location

Point location

FOR BIRDS ONLY

Breeding locations

Wintering locations

Migration corridors

B. References for Distribution (enter the reference codes for all references used in compiling the entries in this section, separate each reference code with a comma):

C. Statewide Resident Status

Check the one category that best describes the species' resident status in the Commonwealth.

	Code	Status	Definition
__	RES-B	Breeding Resident Only	Species primarily present during the breeding season only.
__	RES-W	Winter Resident Only	Species only present during most or all of the winter months.
__	RES-YR	Year-round Resident	Species breeds in Pennsylvania and is present year-round.
__	MIGRANT	Migratory Species	Species does not occur in Pennsylvania year-round or for an extended time period as described above, (i.e. is not a breeding or winter resident). Pensylvania is used only as a migration corridor.
__	UNKNOWN	Unknown	Species for which so few records exist in Pennsylvania that it cannot be classified into a different resident status cateogory.

D. Distribution by County

Complete the table that follows indicating species occurrence at the county level, seasonal occurrence within the counties in which the species "occurs", and species relative abundance within counties in which the species "occurs". Your entries in this table must correspond with information presented in the Distribution Narrative (Section A). Use the following codes and definitions in completing the table.

1. Occurrence codes and definitions are those defined earlier in the definitions.

Occurrence Codes

O - Known to occur
N - Known not to occur
X - Occurrence is unknown

2. Seasonal occurrence codes should be entered for counties in which the species is "known to occur". If the species does not occur in a county, or its occurence in a county is unknown, do not make an entry in that county blank for seasonal occurrence.

Seasonal Occurrence Codes

A - Spring Migration only
B - Spring Migration/Breeding Season
C - Spring Migration/Fall Migration
D - Spring Migration/Winter Season
E - Spring Migration/Breeding Season/Fall Migration
F - Spring Migration/Breeding Season/Winter Season
G - Spring Migration/Fall Migration/Winter Season
H - Breeding Season only
I - Breeding Season/Fall Migration
J - Breeding Season/Winter Season
K - Breeding Season/Fall Migration/Winter Season
L - Fall Migration only
M - Fall Migration/Winter Season
N - Winter Season only

O - Year-round Resident

X - Occurrence in the county by season is unknown

3. Abundance codes should be entered for counties in which the species is "known to occur". If the species does not occur in a county, or its occurrence in a county is unknown, do not make an entry in that county blank for relative species abundance.

Abundance Codes

A - abundant (occurs regularly or in large numbers in appropriate habitat or season or is frequently observed)
C - medium abundance (i.e., common - occurs in small numbers in appropriate habitat or season; observed occasionally in prime habitat)
U - low abundance (i.e., uncommon - occupies a small percentage of suitable habitat; occupies a very specific limited habitat; very few individuals observed in prime habitat)
X - abundance in county is unknown

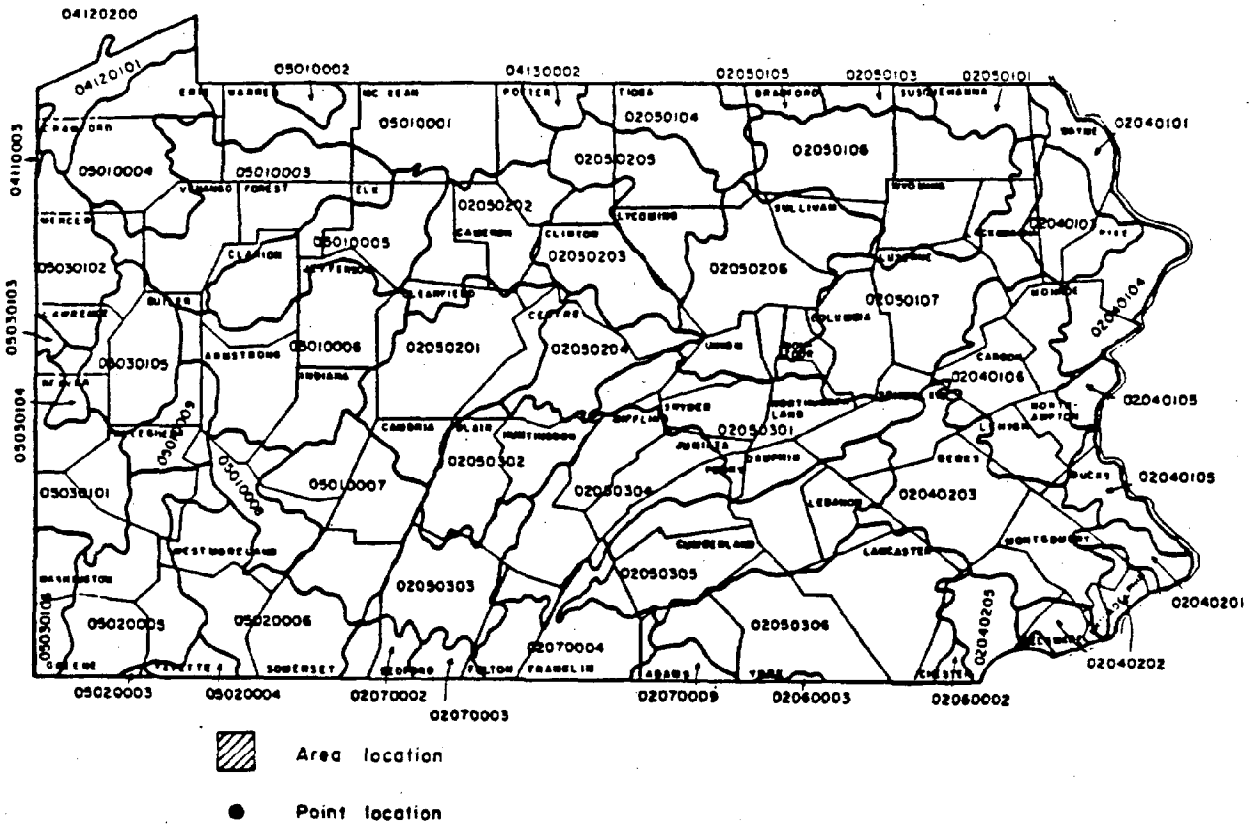
General Distribution

E. Distribution by Office of Water Data Coordination (OWDC) Hydrologic Units in Pennsylvania

NOTE: OWDC hydrologic units refer to watersheds in the state, not aquatic habitats only; therefore, complete this section for all species. For bird species, entries should correspond with "resident" occurrence (breeding, wintering, year-round occurrences).

Using the map provided below (or the large scale - 1:500,000 USGS Hydrologic Unit Map of Pennsylvania) and the checklist on the next two pages, check all the OWDC hydrologic units (watersheds) in which the species "occurs". If the species is found statewide and in all watersheds, check "all" at the top of the list. Your entries should correspond with county level occurrence information (Section D) and the Distribution Narrative (Section A).



E. Distribution by OWDC Hydrologic Units (continued)

__ Species occurs in all OWDC hydrologic units to cataloging unit level as displayed on the USGS Hydrologic Unit Map.

Species does not occur statewide (i.e., in all OWDC hydrologic units), but occurs in the following units:

	Code	Definition
__	02040101	Upper Delaware: Upper Delaware
__	02040103	Upper Delaware: Lackawaxen
__	02040104	Upper Delaware: Middle Delaware - Mongaup - Brodhead
__	02040105	Upper Delaware: Middle Delaware - Musconetcong
__	02040106	Upper Delaware: Lehigh
__	02040201	Lower Delaware: Crosswicks - Neshaminy
__	02040202	Lower Delaware: Lower Delaware
__	02040203	Lower Delaware: Schuylkill
__	02040205	Lower Delaware: Brandywine - Christina
__	02050101	Upper Susquehanna: Upper Susquehanna
__	02050103	Upper Susquehanna: Owego - Wappasening
__	02050104	Upper Susquehanna: Tioga
__	02050105	Upper Susquehanna: Chemung
__	02050106	Upper Susquehanna: Upper Susquehanna - Tunkhannock
__	02050107	Upper Susquehanna: Upper Susquehanna - Lackawanna
__	02050201	West Branch Susquehanna: Upper West Branch Susquehanna
__	02050202	West Branch Susquehanna: Sinnemahoning
__	02050203	West Branch Susquehanna: Middle West Branch Susquehanna
__	02050204	West Branch Susquehanna: Bald Eagle
__	02050205	West Branch Susquehanna: Pine
__	02050206	West Branch Susquehanna: Lower West Branch Susquehanna
__	02050301	Lower Susquehanna: Lower Susquehanna - Penns
__	02050302	Lower Susquehanna: Upper Juniata
__	02050303	Lower Susquehanna: Raystown
__	02050304	Lower Susquehanna: Lower Juniata
__	02050305	Lower Susquehanna: Lower Susquehanna - Swatara
__	02050306	Lower Susquehanna: Lower Susquehanna
__	02060002	Upper Chesapeake: Chester - Sassafras

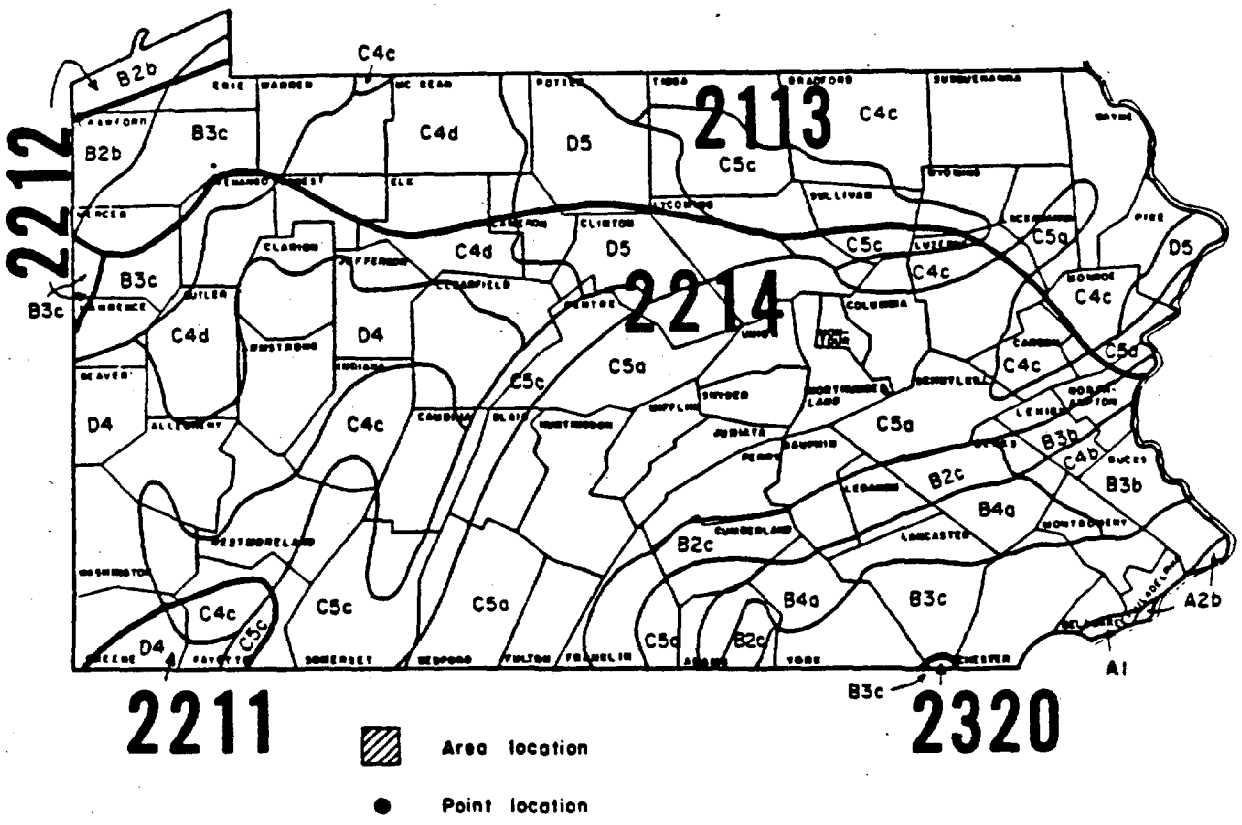
__	05010006	Allegheny: Middle Allegheny - Redbank
__	05010007	Allegheny: Conemaugh
__	05010008	Allegheny: Kiskiminetas
__	05010009	Allegheny: Lower Allegheny
__	05020003	Monongahela: Upper Monongahela
__	05020004	Monongahela: Cheat
__	05020005	Monongahela: Lower Monongahela
__	05020006	Monongahela: Youghiogheny
__	05030101	Upper Ohio: Upper Ohio
__	05030102	Upper Ohio: Shenango
__	05030103	Upper Ohio: Mahoning
__	05030104	Upper Ohio: Beaver
__	05030105	Upper Ohio: Connoquenessing
__	05030106	Upper Ohio - Wheeling

F. Distribution by Ecoregions and Land Surface Forms in Pennsylvania

NOTE: Complete this section for all species.

Ecoregions are designed to stratify ecologically similar areas based on vegetation, soils, climate, and other factors. They are named after a vegetation type characteristic of the area and secondarily by landform. Although an animal species may not specifically associate with the particular vegetation type and/or landform used to name a region (e.g. Appalachian Oak Forest, High Hills), if it "occurs" in that map unit, it should be marked as occurring in that ecoregion.

Using the ecoregion map provided below and the checklist on the next page, check all ecoregions in which the species "occurs". For descriptions and definitions consult the explanatory notes in the Species Workbook Supplemental Manual. Bird species entries should correspond with "resident" occurrence (i.e., breeding, wintering, year-round occurrences). All entries should correspond with county level occurrence information (Section D), and the Distribution Narrative (Section A).



F. Distribution by Ecoregions and Land Surface Forms in Pennsylvania (cont.)

__ Species occurs in all Ecoregions and Land Surface Forms in Pennsylvania as displayed on the preceding map.

Species does not occur statewide (i.e., in all Ecoregions and Land Surface Forms in Pennsylvania), but occurs in the following units:

	Code	Definition
__	2113B2b	Northern Hardwoods Forest, 50-80% gently sloping, 100-300 ft. elevation, 50-75% of gentle slope is in lowland
__	2113B3c	Northern Hardwoods Forest, 50-80% gently sloping, 300-500 ft. elevation, 50-75% of gentle slope is on upland
__	2113C4c	Northern Hardwoods Forest, 20-50% gently sloping, 500-1000 ft. elevation, 50-75% of gentle slope is on upland
__	2113C4d	Northern Hardwoods Forest, 20-50% gently sloping, 500-1000 ft. elevation, more than 75% of gentle slope is on upland
__	2113C5a	Northern Hardwoods Forest, 20-50% gently sloping, 1000-3000 ft. elevation, more than 75% of gentle slope is in lowland
__	2113C5c	Northern Hardwoods Forest, 20-50% gently sloping, 1000-3000 ft. elevation, 50-75% of gentle slope is on upland

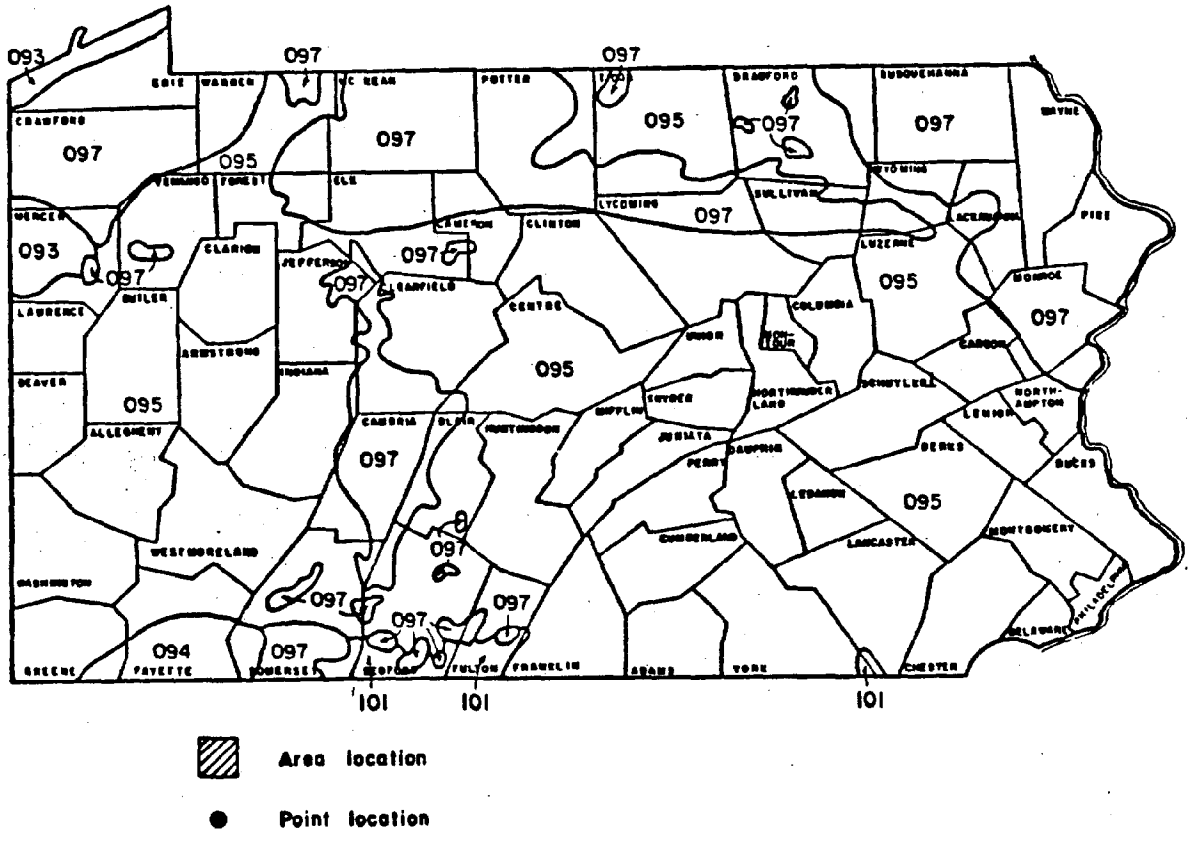
__	2214D4Ø	Appalachian Oak Forest, less than 20% gently sloping, 500-1000 ft. elevation
__	2214D5Ø	Appalachian Oak Forest, less than 20% gently sloping, 1000-3000 ft. elevation
__	2320B3c	Southern Mixed Forest, 50-80% gently sloping, 300-500 ft. elevation, 50-75% of gentle slope is on upland

G. Distribution by Potential Natural Vegetation Types in Pennsylvania

NOTE: Complete this section for all species.

Potential natural vegetation types are vegetation types that would exist today if man were removed and plant succession after his removal were telescoped into a single moment; however, the effects of man's earlier activities are permitted to stand. As such the potential natural vegetation type portrays the biological potential of a site.

Using the map provided below and the checklist on the next page (or a large scale USGS map of potential natural vegetation types), identify all the potential natural vegetation types in which the species "occurs". Bird species entries should correspond with resident occurrence (i.e., breeding, wintering, year-round occurrences). Keep in mind that if the species "occurs" in the map unit, it should be marked as occurring in the potential natural vegetation type. All entries should correspond with county level occurrence information (Section D) and the Distribution Narrative (Section A).



G. Distribution by Potential Natural Vegetation Types in Pennsylvania (cont.)

__ Species occurs in all Potential Natural Vegetation types in Pennsylvania as displayed on the preceding page.

Species does not occur statewide (i.e., in all Potential Natural Vegetation types in Pennsylvania), but occurs in the following types:

	Code	Definition
__	093	Beech-Maple Forest
__	094	Mixed Mesophytic Forest
__	095	Appalachian Oak Forest
__	097	Northern Hardwoods
__	101	Oak-Hickory-Pine Forest

Site-Specific Distribution

H. Distribution by 7 1/2' Quadrangles

NOTE: Complete this section for all species.

Using the U.S. Geological Survey Index to Topographic Map Coverage in Pennsylvania provided in the Species Workbook Supplemental Manual, identify the seven (7) digit USGS 7 1/2' quadrangle code(s) and names that define the species occurrence within the Commonwealth of Pennsylvania. The format for quadrangle codes is as follows:

_ _/_ _ _/_/_
LAT LONG UP OVER
(N) (W)

The first two digits indicate the reference point latitude in degrees; the third, fourth, and fifth digits indicate the reference point longitude (values are right-justified - all longitudes in PA. would begin with 0, e.g., 80 would be 080); the sixth digit is the vertical one-degree row number counting up from the reference point; and the seventh digit is the horizontal one-degree cell counting over from the vertical row number. This is diagrammatically described in the appendix to the USGS 7 1/2' (1:24,000) series Quadrangle Map in the Species Workbook Supplemental Manual.

All entries should correspond with occurrence information provided in the Distribution Narrative (Section A).

___ Species occurs in all 7 1/2' quadrangles in Pennsylvania.

Species does not occur statewide, but occurs in the following quadrangle:

	Quad No.	Quad Name		Quad No.	Quad Name

I. Distribution by Latitude and Longitude

NOTE: Complete this section for 1) special status species, including federal and/or state designations of endangered, threatened, species of special concern, status undetermined, and status indeterminate, and 2) species with a limited resident distribution in Pennsylvania (i.e., species occurring in less than 5% of Pennsylvania counties).

This section is divided into two data entry parts - in part one point locations should be entered and/or the second part enter a series of latitude/longitude points that enclose an area or polygon in which the species occurs.

Latitude and longitude are to be expressed in degrees, minutes, and seconds. Examples are: latitude 03°20'10", longitude 096°36'15". Latitude and longitude should be entered in the following parts as a string separated by commas (e.g., 0320100963615,0320100953620, etc.).

All entries in this section should correspond with occurrence information provided in the Distribution Narrative (Section A).

1. Point Locations - this should be used for species of very limited distribution to designate occurrence (e.g. bald eagle nests, Indiana bat caves, etc.). Separate each latitude/longitude string (13 characters) with a comma.

LATITUDE	LONGITUDE		LATITUDE	LONGITUDE		LATITUDE	LONGITUDE	
_____	_____	,	_____	_____	,	_____	_____	,
_____	_____	,	_____	_____	,	_____	_____	,
_____	_____	,	_____	_____	,	_____	_____	,
_____	_____	,	_____	_____	,	_____	_____	,
_____	_____	,	_____	_____	,	_____	_____	,
_____	_____	,	_____	_____	,	_____	_____	,

2. Polygon or Areal Locations - use this part to describe a more widespread species, or a species of more general occurrence (but still falling into one of the above special status designations). Most appropriately describe the boundary using a series of latitudes and longitudes that encompass a number of point locations that are clustered should fully define the species areas of occurrence in regions of the State.

POLYGON #1:

HABITAT ASSOCIATIONS

A. Habitat Associations Narrative

Develop a complete and concise narrative describing this species habitat associations and preferences. Specifically describe the species associations and preferences with urban lands, agricultural lands, rangelands (i.e. herbaceous fields), forests, wetlands, barren lands, etc. Before developing this narrative, it may be best to review and be aware of the types of information required to complete the checklists that follow in this section and the Environmental Associations' sections. The object is to identify and describe fully the habitats in which this species occurs and those habitats, which if disturbed, would adversely impact the species. Be sure to describe any minimum area requirements, significant seasonal variations in habitat use, variations in habitat requirements which occur in different life stages and geographic areas, requirements or preferences for habitat interspersion and juxtaposition, habitat condition, etc.

Devote a section of this narrative to describing specific environmental parameters required by the species in certain habitats (e.g. temperature, pH, alkalinity, turbidity, dissolved oxygen, flow rates, velocity, salinity, soil moisture, soil depth, elevation, etc.). Again, it would be most helpful to review the Environmental Associations section prior to compiling this information.

Be certain to cite the appropriate reference codes (e.g. Ø3:435-45Ø, Ø6:14) for all information, and record the complete citations in the REFERENCE section at the back of this workbook.

B. References for Habitat Associations (enter the reference codes for all references used in compiling the entries in this section, separate each reference code with a comma):

C. General Habitat Associations

In the following checklist, check all appropriate categories that correspond to the species - habitat associations (i.e., where the species normally occurs):

__ Terrestrial habitats

__ Aquatic habitats

__ Riparian habitats: Terrestrial land bordering streams, lakes, reservoirs (i.e. water): ecotone between aquatic and upland habitats that is influenced by the water regime.

D. Land Use/Land Cover Associations

In the following list, check all appropriate land use/land cover types with which the species is associated and those that are most important or preferred by the species. (Consult A LAND USE AND LAND COVER CLASSIFICATION SYSTEM FOR USE WITH REMOTE SENSOR DATA, U.S. Geological Survey, Professional Paper No. 964, 1976, for use/cover descriptions, or the land use/cover explanatory notes in the Species Workbook Supplemental Manual).

****

__ Association with specific land use/land cover types are unknown

Assoc. (A) = Species is generally associated with land use/cover type
Pref. (P) = Species demonstrates a preference for the land use/cover type specified

A	P	Code	Land Use/Land Cover Type
			URBAN OR BUILT-UP LAND
__	__	11	Residential
__	__	12	Commercial and Services
__	__	13	Industrial
__	__	14	Transportation, Communications, and Utilities
__	__	15	Industrial and Commercial Complexes

__	__	42	Evergreen Forest Land
__	__	43	Mixed Forest Land
			WATER
__	__	51	Streams and Canals
__	__	52	Lakes
__	__	53	Reservoirs
__	__	54	Bays and Estuaries
			WETLAND
__	__	61	Forested Wetland
__	__	62	Nonforested Wetland
			BARREN LAND
__	__	72	Beaches
__	__	73	Sandy Areas other than Beaches
__	__	74	Bare Exposed Rock
__	__	75	Strip Mines, Quarries, and Gravel Pits
__	__	76	Transitional Areas
__	__	77	Mixed Barren Land

E. Forest Habitat Associations

In the table that follows, check all appropriate forest types/size classes with which the species is associated. Use the Species Workbook Supplemental Manual for forest cover type descriptions. If available species information fails to identify a specific size class association, check all size classes.

Size class definitions are as follows:

A. Grass/Forb = understory is in grasses and forbs or other vegetation, no regeneration of tree species

B. Seedling/Shrub = understory predominately trees less than 1" diameter

C. Sapling = young stand of trees (trees 1" to 5" dbh)

D. Pole = young stand of trees [trees 5" - 9" dbh (softwoods) or 11" dbh (hardwoods)]

E. Mature = mature stand of trees [trees ≥ 9" dbh (softwoods) or 11" dbh (hardwoods), but not "old growth"]

F. Old Growth = old growth stand of trees (trees which are rotting or dying due to old age)

****

__ Association with specific forest types are unknown
__ Species does not associate with forests

F. Timber Class Association

Check the box(es) below that represent the timber inventory size classes with which the species is associated.

__ Species Association with specific timber size classes is unknown or insufficient data to make a determination

__ Species is not associated with timber/forest land

****

__ All Forest Size Classes

__ Unstocked (nonstocked areas) - timberland less than 10 percent occupied with growing-stock trees

__ Seedling/Sapling - stands at least 10 percent occupied with growing stock trees of which more than half of the stocking is in saplings (1.0 - 4.9 inches dbh) and/or seedlings (<1.0 inch dbh)

__ Pole (Poletimber stands) - stands at least 10 percent occupied with growing stock trees of which half or more of this stocking is in poletimber (5.0 - 9.0 inches dbh for softwoods; 5.0 - 11.0 inches dbh for hardwoods) and/or sawtimber trees, and with poletimber stocking exceeding that of sawtimber

__ Mature (Sawtimber stands) - stands at least 10 percent occupied with growing stock trees, with half or more of total stocking in sawtimber (≥9.0 inches dbh for softwoods; ≥11.0 inches dbh for hardwoods) or poletimber trees, and with sawtimber stocking at last equal to poletimber stocking

__ Over Mature - stands at least 10 percent occupied with growing stock trees, with half or more of total stocking in over mature (decadent) or sawtimber trees, and with over mature stocking at least equal to sawtimber stocking

G. Wetland Habitat Associations

From the lists that follow, check all wetland habitat types with which the species is associated. Note that the system is hierarchical, indicate wetland associations to the subclass level in the checklists. Use the Wetland Classification Scheme information presented below and on the next two pages, and the booklet, CLASSIFICATION OF WETLANDS AND DEEPWATER HABITATS OF THE UNITED STATES, FWS/OBS-79/31, Washington, D.C., for habitat descriptions.

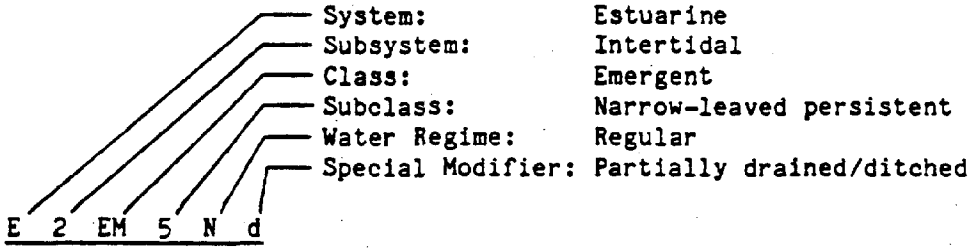
****

WETLAND CLASSIFICATION SCHEME

Use of Wetland Legend: Species are related to wetlands by a series of letters and numbers (alpha numerics) with the first letter representing the system and subsequent alpha numerics representing, in sequential order, the subordinate levels of detail to modifier level. Note: The lists that are provided in this section require specifying wetland associations to the subclass level only. Special modifiers, i.e. water regime, water chemistry, and other modifiers, should be identified and referenced in the Habitat Associations Narrative.

Example

Classification of wetlands to water regime and special modifier:



****

NICHE/ENVIRONMENTAL REQUIREMENTS

Use the following lists to describe 1) the range of environmental conditions in which the species occurs regardless of life stage/activity (even though the conditions may represent suboptimal conditions); and 2) the specific limiting environmental conditions that are necessary for the species to survive and complete its life cycle for the species as a whole and by activity/life stage. Keep in mind that this section is an extension of Habitat Associations and any explanations of entries in this section and references should be cited in the Habitat Associations narrative.

Apply the following instruction in deciding whether an environmental parameter is necessary - an environmental parameter is necessary if a change or modification of the parameter or condition has the potential for negatively impacting the species survival (and the species population, behavior, or distribution).

Using the lists on the pages that follow, check those parameter values that represent conditions in which the species will occur (column labeled Environmental Associations) and check those values that represent conditions that are necessary for the species to survive and complete its life cycle (column labeled Limiting Factors). Note: A species may be associated with many parameters and values, but have limiting factors identified for only a few parameters and values. For every limiting factor, check the activity/life stage for which the factor is important. To illustrate, a fish species x will be found in a variety of aquatic habitats with water temperatures ranging from 4°C to 25°C on a seasonal basis; however, breeding adults require water temperatures between 11°C and 14.5°C to spawn and the eggs must have water temperatures of 16°C to 18°C to hatch. On the first page of the checklist for the parameter "Water Temperature" for the fish just described, the following checks would be placed: The Environmental Associations column would have checks placed across from second order values B and C (water temperatures between 0°C to 30°C); the Limiting Factors column would have checks across from second order values B and C, too; the Egg column would receive a check for the value B; and the Breeding Adult column would receive a check for the value C.

Keep in mind that these checklists are designed to summarize specific information recorded in the narrative sections of the workbook into standard keywords. These keyword values will permit rapid retrievals from the database, but precise values and explanations should be recorded in the narrative. Remember, the narrative should function as a source for these checklists.

Different life stages will be completed in the following pages depending on taxonomic group. The five life stages - egg, larva, pupa, juvenile, and adult - are defined for the following taxonomic groups:

	Taxonomic Group	Egg	Larva	Pupa	Juvenile	Adult
Ø1	Fishes	x	x		x	x
Ø2	Amphibians	x	x			x
Ø3	Reptiles	x			x	x
Ø4	Birds	x			x	x
Ø5	Mammals				x	x
Ø6	Aquatic Molluscs	x	x			x
Ø7	Aquatic Crustaceans	x	x		x	x
Ø8	Aquatic Insects	x	x	x	x	x
Ø9	Other Aquatic Invertebrate Taxa	x	x	x	x	x
1Ø	Terrestrial Insects	x	x	x	x	x
11	Other Terrestrial Invertebrate Taxa	x	x	x	x	x

Environmental Parameter (First Order)		Environmental Association	Limiting Factors	Egg	Feeding Larva	Resting Larva	Pupa	Feeding Juvenile	Resting Juvenile	Feeding Adult	Resting Adult	Breeding Adult	Environmental Parameter (Second Order)
I. Physical/Chemical													
A. AIR DESCRIPTORS													
Air Temperature	00010												A. Less than 0°C (32°F)
													B. 0° - 4° (32°F - 39°F)
													C. 4° - 15° (40°F - 59°F)
													D. 15° - 32°C (60°F - 90°F)
													E. Greater than 32°C (>90°F)
B. AQUATIC DESCRIPTORS													
Water Temperature	00070												A. Euthermal - prefers temperature greater than 30°C (86°F)
													B. Mesothermal - prefers temperature between 15°-30°C (59°F - 86°F)
													C. Oligothermal - prefers temperature between 0°-15°C (32°F - 59°F)
													D. Indifferent - enjoys a wide range in temperatures
Dissolved Oxygen	00130												A. Euoxyphilous - needs high (>9 mg/l) O_2 concentrations (saturated)
													B. Mesoxyphilous - needs moderate (6-9 mg/l) O_2 concentrations
													C. Oligoxyphilous - needs low O_2 concentrations (<6 mg/l)
													D. Anoxyphilous - enjoys a wide O_2 concentration range
Water pH	00190												A. Acidobiontic - prefers pH below 5.5
													B. Acidophilous - prefers pH below 7
													C. Neutral - prefers pH about 7
													D. Alkaliphilous - prefers pH above 7
													E. Alkalibiontic - prefers pH above 8.5
													F. Indifferent - no pH preference shown
Specific Conductance	01220												A. Less than 800
													B. 800-8000
													C. 8000-30,000
													D. 30,000-45,000
													E. 45,000-60,000
													F. Greater than 60,000

A. Less than 30 ppm/CaCO3
B. 30-120 ppm/CaCO3
C. 120-200 ppm/CaCO3
D. Greater than 200 ppm/CaCO3
Total Hardness
01240
A. Less than 20 ppm
B. 20-150 ppm
C. Greater than 150 ppm
Current Velocity
00790
A. .5 fps or less
B. .5-.99 fps
C. 1.0-1.49 fps
D. 1.5-1.99 fps
E. 2.0-2.49 fps
F. 2.5-2.99 fps
G. 3.0-3.49 fps
H. 3.5 - greater fps
Flow
00710
A. Rheophile - living in flowing water
B. Helokrene - living in a marsh spring
C. Intermittent flow - periodic standing water
D. Small stream inhabitant - flows less than 50 cfs mean annual flow
E. Medium size stream inhabitant - flows between 50-1,000 cfs mean annual flow
F. Large size stream inhabitat - flows between 1,000-5,000 cfs mean annual flow
G. River inhabitant - flows greater than 5,000 cfs mean annual flow
Gradient
00700
A. Low
B. Moderate
C. High

Environmental Parameter (First Order)		Environmental Associations	Limiting Factors	Egg	Feeding Larva	Resting Larva	Pupa	Feeding Juvenile	Resting Juvenile	Feeding Adult	Resting Adult	Breeding Adult	Environmental Parameter (Second Order)
Water Depth	01250												A. Less than 1 ft.
													B. 1-5 ft.
													C. 5-10 ft.
													D. 10-25 ft.
													E. 25-50 ft.
													F. 50-100 ft.
													G. 100-200 ft.
													H. 200-500 ft.
													I. 500-1000 ft.
													J. 1000-1500 ft.
													K. Greater than 1500 ft.
Water Level	01030												A. Permanently flooded - species preferences
													B. Intermittently exposed
													C. Semipermanently flooded
													D. Seasonally flooded
													E. Saturated
													F. Temporarily flooded
													G. Intermittently flooded
													H. Artificially flooded
													I. Reservoir tailwater
													J. Steady-state reservoir levels
													K. Fluctuating reservoir water levels
Substrate and Relation to Substrate	00670												A. Epibenthic - occurring on, but not penetrating the substrate and submerged objects
													B. Embenthic - occurring in, penetrating, the substrate
													C. Epipelic - occurring on (or in) mud and silt
													D. Episabulic - occurring on (or in) sand
													E. Epilithic - occurring on (or under) rocks
													F. Epixylous - occurring on (or into) wood
													G. Epizoic - occurring on (or within) other animals
													H. Epiphytic - occurring on (or within) plants
													I. Attached - normally sessile
													J. Unattached - normally free living, and capable of locomotion

Environmental Parameter (First Order)		Environmental Association	Limiting Factors	Egg	Feeding Larva	Resting Larva	Pupa	Feeding Juvenile	Resting Juvenile	Feeding Adult	Resting Adult	Breeding Adult	Environmental Parameter (Second Order)
Bottom Type (Aquatic)	00675												A. Mud or silt B. Sand C. Pebble D. Gravel E. Rubble F. Boulders G. Bedrock H. Organic debris I. Rooted aquatic vegetation
Percent of Substrate/ Bottom Covered (by aquatic vegetation, logs, debris, etc.)	00677												A. Less than 20% B. 20-40% C. 40-60% D. 60-80% E. Greater than 80%
Stability of Bottom	00680												A. Stable B. Unstable
Turbidity	00310												A. Eulichotophilous - prefers low turbidities (clear water) B. Mesolichtophilous - prefers generally clear water, but tolerates periodic cloudiness C. Polylichtophilous - enjoys a wide range of turbidities D. Oliglichtophilous - prefers high turbidities - murky water
Total Dissolved Solids	00370												A. Less than 5000 ppm B. Between 5000-10,000 ppm C. Greater than 10,000 ppm

Environmental Parameter (First Order)		Environmental Association	Limiting Factors	Egg	Feeding Larva	Resting Larva	Pupa	Feeding Juvenile	Resting Juvenile	Feeding Adult	Resting Adult	Breeding Adult	Environmental Parameter (Second Order)
Nutrients (Phosphorus and Nitrogen)	00430												A. Eutrophic - prefers high nutrient concentrations
													B. Mesotrophic - prefers moderate nutrient concentrations
													C. Oligotrophic - prefers low nutrient concentrations
													D. Dystrophic - prefers warm, humic rich habitat
Biodegradeable Organics	00610												A. Saprophilic - prefers polluted waters with brief periods of DO concentractions under 5 mg/l, pH 2 SUs, and temps exceeding 25°C
													B. Faculatative - wide range of tolerance to organic pollution, *pH tolerance*
													C. Saprozenous - prefers clean water habitats, can tolerate infrequent periods of low DO if pH and temps are unaltered
													D. Saprophobic - restricted to clean waters that have not been exposed to pollution
Trophic Zones	00850												A. Heterotrophic - belonging to nonself-sustaining community of organisms; needs outside energy
													B. Autotrophic - belonging to a self-nourishing community of
Trophogenic Zones	00910												A. Epilimnion inhabitant - needs well lighted, upper layer of standing water
													B. Hypolimnion inhabitant - needs dark, lower layer of standing water
Aquatic Habitat Zonation	00970												A. Littoral zone inhabitant - prefers the shallows with emergent vegetation
													B. Sublittoral zone inhabitant - prefers dimly lighted region without emergent vegetation
													C. Profundal zone inhabitant - prefers the cold, stratified region with no light and reduced oxygen levels and high pH, temperatures are uniform, sediments fine grained
													D. Pelagic - needs open water
													E. Planktonic - microscopic plants and animals

HABITAT EVALUATION PROCEDURES MODELS

Is there an existing model for this species? __ Yes __ No

If yes, indicate type(s) below:

__ PAMHEP
__ HEP
__ DRAFT-HEP

Habitat Evaluation Procedures Models Description (enter the model preparer, date prepared, agency affiliation, habitats and land use types for which the model applies):

ANIMAL AND PLANT ASSOCIATIONS

Use the space provided below to identify important animal and plant associations; i.e., predation, parasitism, symbiosis, commensalism, mutualism, etc. Of particular interest are dependent relationships where such relationships offer predictability of occurrence. Describe each pair or group of species in an association using their common and scientific names, with the names preceded by the type of relationship, and explain the relationship.

Be certain to follow each entry with the reference code of the reference for the source of the relationship.

References for Animal and Plant Associations (enter the reference code for all references used in compiling the entries in this section, separate each reference code with a comma):

FOOD HABITS

A. Food Habits Narrative

Develop a complete and concise description of the food items consumed by this species during its life. If available, give specific information on the foods (e.g. deer mice, frogs, and fungi, etc.) and food parts (e.g. leaves, bark, cambium, flower petals, hair, blood, etc.) consumed during each life stage of the species, i.e., the foods consumed by larva, juvenile, and adult life stages. Devote a section of the description to preferred food types and those foods essential to the species as a whole. Also, devote a paragraph or section to a discussion of seasonal variations or changes in food habits and preferences by food types and/or food parts.

Provide appropriate reference codes, including page numbers, for all information and record the complete citations in the Reference Section at the back of this workbook.

B. References for Food Habits (enter the reference codes for all references used in compiling the entries in this section, separate each reference code with a comma):

C. General Food Habit of the species (check the one value that best characterizes the food habits of the species):

__ Carnivore
__ Insectivore
__ Herbivore
__ Omnivore

D. Food Habits Checklist (check all that apply):

Check the appropriate column identifying the foods consumed by the species at the various life stages. For example, if the animal consumes bird eggs as a juvenile and adult, then you would check the Juvenile and Adult columns next to the value "Bird eggs - 2150".

The three life stages - larva, juvenile, and adult - are defined for the following taxonomic groups:

	Taxonomic Group	Larva	Juvenile	Adult
Ø1	Fishes	x	x	x
Ø2	Amphibians	x		x
Ø3	Reptiles		x	x
Ø4	Birds		x	x
Ø5	Mammals		x	x
Ø6	Aquatic Molluscs	x		x
Ø7	Aquatic Crustaceans	x	x	x
Ø8	Aquatic Insects	x	x	x
Ø9	Other Aquatic Invertebrate Taxa	x	x	x
1Ø	Terrestrial Insects	x	x	x
11	Other Terrestrial Invertebrate Taxa	x	x	x

[1]Larva - includes the immature life stages of aquatic insects known as nymphs, the free-swimming and glochidia stage of molluscs and the nauplius stage of crustaceans.

[2]Juvenile - a young individual (not larva) that resembles an adult, but is not sexually mature.

[3]Adult - a sexually mature individual.

LIFE HISTORY

In the following sections, describe the species life history. Be as complete and concise as possible.

Attempt to address most of the elements described in each section, but be concise. Be certain to follow each item of information with the reference code and page numbers that indicate the source of the information.

A. Life History Narrative

1. Physical Description

Provide a brief morphological description of the species including descriptors for size, color, etc.

2. Origin Within Pennsylvania

Describe this species origin within Pennsylvania (e.g., native, introduced, etc.). If the species is not native to Pennsylvania, include descriptive information concerning the source of animals, etc.

3. Behavior

Describe the behavior of the species including: territoriality, home range size, dispersion within natural habitat, diurnal periodicity, seasonal periodicity, movement/migration patterns within and out of Pennyslvania, dispersal, foraging strategy and sites, and interspecific and intraspecific interactions.

4. Reproductive Characteristics and Requirements

Describe the details of this species breeding behavior and characteristics, as well as reproductive site requirements, including: breeding season, mating system, duration of pair bond (if any), display site, gestation/incubation period, delayed fertilization or implantation, number of offspring per reproductive cycle, number of reproductive cycles per year, type of nesting/denning/spawning site, placement of nest/den, type of materials required for nesting/denning/spawning site, development of offspring, parental care of offspring, age at sexual maturity, minimum and maximum and breeding age, sex ratio's of clutch/litter/offspring.

5. Population Biology

Describe the population biology of this species, including: relative population trend, average annual mortality rate, survival rates, average and optimum population densities, rate of increase, sex ratio, and turnover rates.

6. Limiting Factors

Describe limiting factors that are influencing this species in including: predation, disease, food, competition, population levels, space, cover, natural catastrophes, and other factors.

B. References for Life History (enter the reference codes for all references used in compiling the entries in this section, separate each reference code with a comma):

C. Life History Checklists

Complete the following life history checklists. These checklists are used to summarize information in a consistent format with standard definitions facilitating automated data element search and retrieval.

Checklist entries should be consistent with the life history narrative. Check all categories and values in a category that apply. If a category does apply, but an appropriate value does not exist to describe the species, then write in the appropriate value or entry in the category checklist.

1. ORIGIN WITHIN PENNSYLVANIA

__ 001A Native

__ 001B Transplanted - originally native to another state, now in Pennsylvania

__ 001C Exotic - originally native to another country, now in Pennsylvania

__ 001D Feral - animals which have escaped from domestication

__ 001E Hybrid - offspring of two separate, but closely related species

__ 001F Reintroduced native - species once extirpated in Pennsylvania, now reintroduced

__ 001G Stocked - populations are artificially maintained

2. BEHAVIOR

A. Territoriality

__ 024A Defends entire breeding, feeding, and nesting territory
__ 024B Defends breeding and nesting territory
__ 024C Defends breeding territory only
__ 024D Defends nesting territory only
__ 024E Defends feeding territory only
__ 024F Non-territorial

B. Territory Size

___	025A	Less than 1/4 acre
___	025B	1/4 - 1 acre
___	025C	1 - 5 acres
___	025D	5 - 20 acres
___	025E	20 - 100 acres
___	025F	Greater than 100 acres

C. Home Range Size

___	026A	Less than 1/4 acre
___	026B	1/4 - 1 acre
___	026C	1 - 5 acres
___	026D	5 - 20 acres
___	026E	20 - 100 acres
___	026F	Greater than 100 acres

D. Dispersion

___	027A	Random
___	027B	Uniform
___	027C	Clumped

E. Periodicity

___	028A	Active at night
___	028B	Active in day
___	028C	Active at dawn and/or dusk (crepuscular)
___	028D	Cyclic day-night activity rhythms
___	028E	Most active in winter
___	028F	Most active in early spring
___	028G	Most active in late spring
___	028H	Most active in early summer
___	028I	Most active in late summer
___	028J	Most active in fall

F. Foraging Strategy

___	002A	Gleaning
___	002B	Probing
___	002C	Hovering
___	002D	Hawking
___	002E	Grazing
___	002F	Browsing
___	002G	Scavenging
___	002H	Stalking
___	002I	Filtering
___	002J	Flycatching
___	002K	Diving (Aquatic)
___	002L	Stooping
___	002M	Ambushing
___	002N	Pouncing

G. Foraging Sites

___	003A	Ground Surface
___	003B	Air
___	003C	Herbaceous vegetation
___	003D	Snags (dead/dying trees)
___	003E	Stumps
___	003F	Shrubs Cover/Canopy
___	003G	Understory tree canopy
___	003H	Branches of overstory trees
___	003I	Canopy of overstory trees
___	003J	Trunk of trees
___	003K	Tree cavities
___	003L	Rocks
___	003M	Logs
___	003N	Underground burrows
___	003O	Caves
___	003P	Cliffs/Ledges
___	003Q	Standing Water - Littoral Zone
___	003R	Standing Water - Limnetic Zone
___	003T	Standing Water - Profundal Zone
___	003U	Flowing Water - Riffles
___	003V	Flowing Water - Pools
___	003W	Flowing Water - aquatic weedbeds/vegetation

3. REPRODUCTION

A. Breeding/Spawning Season

__ 004A January
__ 004B February
__ 004C March
__ 004D April
__ 004E May
__ 004F June
__ 004G July
__ 004H August
__ 004I September
__ 004J October
__ 004K November
__ 004L December

B. Mating System (Single breeding season)

__ 006A Monogamy (male or female mates once or with only one male or female)
__ 006B Polygyny (male mates with more than one female)
__ 006C Polyandry (female mates with more than one male)
__ 006D Promiscuity (both males and females mate with more than one male or female)
__ 006E Polybrachygamy
__ 006F Colonial

C. Duration of Pair Bond

__ 007A Pair for life
__ 007B Pair for one breeding season
__ 007C No pair bond formed

D. Display Site

__ 008A Ground
__ 008B Water
__ 008C Air
__ 008D Perch
__ 008E Cavity
__ 008F Lek/Arena
__ 008G Log
__ 008H Nest

E. Gestation/Incubation Period (insemination to parturition or egg laying to hatching)

___ 015A Less than 1 day
___ 015B 1-2 days
___ 015C 3-4 days
___ 015D 5-7 days
___ 015E 1-2 weeks
___ 015F 3-4 weeks
___ 015G 1-2 months
___ 015H 3-4 months
___ 015I 5-6 months
___ 015J 7-8 months
___ 015K Greater than 8 months

F. Average Number of Offspring/Reproductive Effort

___ 016A 1
___ 016B 2
___ 016C 3-4
___ 016D 5-7
___ 016E 8-10
___ 016F 11-15
___ 016G 16-30
___ 016H 31-100
___ 016I 101-1000
___ 016J 1000-10,000
___ 016K Greater than 10,000

G. Number of Broods/Litters (Reproductive Efforts) Per Year

___ 017A One
___ 017B Two
___ 017C Three
___ 017D Greater than three

H. Spawning Site

___ 010A Standing water
___ 010B Flowing water
___ 010C Sand
___ 010D Gravel
___ 010E Rocks
___ 010F Detritus
___ 010G Mud
___ 010H Aquatic vegetation

I. Nest/Den Site

___	009A	Cavity in live tree
___	009B	Cavity in dead tree
___	009C	Primary cavity (excavates its own)
___	009D	Secondary cavity (use cavity excavated by another species)
___	009E	Under bark
___	009F	On the ground
___	009G	Underground burrow
___	009H	Hole in ground
___	009I	Depression
___	009J	Grass/Forbs
___	009K	Shrubs
___	009L	Stumps
___	009M	Trees
___	009N	Floating aquatic vegetation
___	009O	Emergent aquatic vegetation
___	009P	Rush and cattails
___	009Q	Log
___	009R	Dirt bank
___	009T	Cave
___	009U	Under rocks/rock outcrops
___	009V	Man-made structures (houses, barns, silos, etc.)
___	009W	Under leaves
___	009X	Underwater burrow
___	009Y	Ledges
___	009Z	Bare ground (no or sparce vegetation)/sand beaches
___	009AA	Upturned tree roots

J. Nest Materials

___	013A	Grasses
___	013B	Forbs
___	013C	Sticks
___	013D	Vegetative Crown
___	013E	Leaves
___	013F	Bark
___	013G	Mud
___	013H	Hair and feathers
___	013I	Rootlets
___	013J	No nest structure
___	013K	Moss
___	013L	Sand
___	013M	Gravel
___	013N	Organic debris
___	013O	Inorganic debris
___	013P	Aquatic vegetation

K. Development of Young at Birth/Hatching

___ 018A Altricial
___ 018B Precocial

L. Parental Care of Young

___ 019A Female
___ 019B Male
___ 019C Both parents
___ 019D Foster parents
___ 019E No care given young

4. POPULATION CHARACTERISTICS

A. Population Trend (Statewide)

___ 036A Increasing
___ 036B Stable
___ 036C Decreasing
___ 036D No trend-variable

B. Reasons For Population Trend

___ 032A Low Reproductive Potential
___ 032B Periphery of Range
___ 032C Overharvesting
___ 032D Disease
___ 032E Predation
___ 032F Environmental Contaminants (including heavy metals)
___ 032G Herbicides
___ 032H Pesticides/Insecticides
___ 032I Habitat Loss
___ 032J Habitat Improvement
___ 032K Range Expansion (Habitat Addition)
___ 032L Underharvesting
___ 032M High Reproduction
___ 032N Seasonal and Catastrophic Weather Conditions
___ 032O Interspecific Competition
___ 032P Intraspecific Competition

C. Population Potential Through Habitat Manipulation (MGMT)

___ 037A Increase < 10%
___ 037B Increase 10-25%
___ 037C Increase > 25%
___ 037D Decrease < 10%
___ 037E Decrease 10-25%
___ 037F Decrease > 25%

MANAGEMENT

A. Management Narrative

Develop a narrative describing those management activities or human actions that affect the species survival. Identify and describe those actions or activities that improve or are harmful to the species or its habitat. Also explain actions or activities that have a varying influence depending on how the action is implemented, and any other variations by geographic area, season, etc.

B. References for Management (enter the reference codes for all references used in compiling the entries in this section, separate each reference code with a comma):

C. Management Checklists

Check as beneficial those actions that improve a species habitat or benefit the species chance for survival. Check as harmful those actions that have an adverse impact on a species or its habitat and present a threat to the species survival. Check as many values as apply for both beneficial and harmful. Some actions may be both beneficial and harmful (make certain this situation is properly explained in the Management Narrative).

****

BENEFICIAL		HARMFUL	ACTION
_	001	_	Regulate numbers and sex of harvest
_	002	_	Prohibiting harvest of species being described
_	003	_	Transplanting wild animals
_	004	_	Stocking captive-reared domestic-strain animals
_	005	_	Stocking captive-reared wild-strain animals
_	006	_	"Put-and-Take" stocking
_	008	_	Restricting/regulating human use of habitats
_	009	_	Restricting/regulating human disturbance of populations
_	010	_	Restrict human harassment during migration
_	011	_	Restrict human disturbance during breeding or other stressful periods
_	101	_	Retention of wilderness
_	102	_	Maintaining undisturbed/undeveloped areas
_	103	_	Limit number of roads and road usage
_	104	_	Suppressing wild fire
_	110	_	Maintaining natural vegetation (native)
_	111	_	Maintaining natural ecological succession
_	112	_	Maintain early stages of succession
_	113	_	Creation and maintenance of edge situation

BENEFICIAL		HARMFUL	ACTION
_	120	_	Maintaining woodlots
_	121	_	Maintain mast producing trees
_	122	_	Creating/maintaining snags
_	123	_	Retaining dead/downed woody materials
_	124	_	Maintaining large trees for denning, nesting, or roosting
_	125	_	Creating tree cavities by mechanical excavation/ introduction of fungi/etc.
_	126	_	Retain or produce special habitat features as caves, cliffs, rims, ledges, etc.
_	127	_	Developing/maintaining greenspace (wildlife corridors)
_	128	_	Establish/maintain escape cover
_	129	_	Establishing/maintaining nesting cover
_	130	_	Providing artificial nesting sites
_	131	_	Providing ledges on highwalls
_	132	_	Providing nesting cavities in highwalls
_	133	_	Creating artificial leks or display grounds
_	134	_	Providing artificial nesting/spawning sites
_	135	_	Creating/maintaining supplemental water sources
_	136	_	Develop artificial water devices or catchments
_	137	_	Developing/maintaining water holes, ponds, potholes, etc.

_	141	_	Development of food plots
_	142	_	Supplemental feeding (winter, spring, etc.)
_	150	_	Grassland burning
_	151	_	Prescribed burning of brushland habitat
_	152	_	Haying/mowing - May up to mid-June
_	153	_	Haying/mowing - After mid-June
_	154	_	Brush removal/cutting in pastures and cropland
_	155	_	Chaining vegetation to improve habitat
_	156	_	Establishment of field borders
_	157	_	Locating/constructing fences
_	158	_	Creating wind and snowbreaks
_	159	_	Developing/maintaining hedgerows
_	160	_	Creating/maintaining rock piles
_	161	_	Developing/maintaining brush or slash piles
_	162	_	Developing/maintaining ditchbank vegetation
_	163	_	Removal of hedgerows
_	164	_	Removal of stone walls

BENEFICIAL		HARMFUL	ACTION
	170		Plantings (shrubs, grasses, trees, etc.)
	171		Planting hardy, drought-resistant plants
	172		Plantings (grasses)
	173		Plantings (shrubs)
	174		Plantings along roadsides
	175		Transplanting native vegetation
	176		Transplanting nursery grown plants
	180		Using flushing devices on mowers
	181		Using taste repellents
	182		Using odor repellents
	183		Using noise or visual repellents
	200		Stream bank preservation
	201		Stream bank protection - gabion matting or riprap
	202		Developing/maintaining streambank/streamside vegetation
	203		Removal of streamside vegetation
	204		Siltation
	205		Controlling sedimentation
	206		Providing overstory shade adjacent to waterways to prevent high water temperature
	207		Maintaining dry streambeds and/or gullies
	208		Planting hedgerows along dry streambeds and/or gullies
	209		Creating artificial stream meanders
	210		Creating pools in streams
	211		Creating riffles in streams
	212		Developing/maintaining stream structures
	213		Mechanical manipulation of stream bottoms
	214		Maintaining/protecting riparian habitat
	215		Man caused fluctuations in water level during breeding season
	216		Placing artificial islands or rafts in water
	217		Creating/maintaining islands within permanent impoundments
	218		Maintain and/or create submerged brush and timber in rivers, lakes, and reservoirs
	219		Seeding aquatic plants
	220		Plantings (aquatic plants)
	221		Developing/maintaining suitable salinity
	222		Developing/maintaining suitable pH
	223		Liming and fertilizing ponds/lakes
	224		Controlling vegetation in ponds and waterways
	225		Nutrient and bacteria loading of streams

BENEFICIAL		HARMFUL	ACTION
	300		Developing/maintaining/protecting freshwater wetlands
	301		Developing/maintaining/protecting brackish wetlands
	302		Draining/excavating wetlands, including marshes with vegetatior
	303		Draining/excavating ponds and lakes
	304		Subsurface land drainage
	400		Dredging
	401		Deposition of fill
	402		Channelization
	403		Channel Realignments
	404		Channel deepening
	405		Channel widening
	406		Channel lining
	407		Creation of concrete channel
	408		Clearing/snagging
	420		Navigational improvements (i.e., dams and locks)
	421		Constructing/maintaining piers
	422		Constructing/maintaining moring piles, dolphins and buoys
	423		Constructing/maintaining bulkheads, seawalls and dikes
	424		Constructing/maintaining jetties, groins and breakwaters
	425		Dry dam construction for flood control
	426		Impoundment of waterways (flood control, recreation, etc.)
	427		Development of shallow water impoundments
	428		Increase in deep water habitats
	429		Developing fishways
	430		Establishment of elevated floodways
	431		Maintain constant water pool level
	432		Water levels seasonally fluctuating in reservoirs
	433		Entrainment/impingement from water intakes

	900		Intensive recreational development
	901		Rights-of-way management for wildlife
	902		Creation of suburban residential areas
	903		Industrial pollution
	904		Locating/constructing powerlines and other rights-of-way
	905		Controlling pollution (thermal, chemical, physical)
	906		Controlling refuse disposal (landfills)
	950		Specimen collection
	951		Egg collection

REFERENCES

Record the complete citations for the references you used to complete this booklet. If the information was from verbal communications with a recognized expert, record the individual expert's name, affiliation, and address, and date of communication. Assign each citation a two (2) digit code number for use in completing the various sections of this workbook. Enter the references used in completing this booklet in sequential order. The first reference number (ØØ) is reserved for your name and address, telephone number, and affiliation - even if you are not referencing yourself in the remainder of the workbook.

Use the following convention when citing reference sources: Author name(s), date, title, source document, pages in source document. Specific questions should be referenced to the Data Base Manager or the CBE (Council of Biology Editors, 1978) Style Manual.

ACKNOWLEDGMENTS

This Species Workbook and the resulting Pennsylvania Fish and Wildlife Data Base are the result of a continuing effort over several years by many individuals and agencies to provide readily accessible species information for use in natural resource planning and management. Agencies that have contributed to this project over the many years include the U.S. Fish and Wildlife Service, U.S. Bureau of Land Management, U.S. Army Corps of Engineers, U.S. Office of Surface Mining, U.S. Soil Conservation Service, U.S. Forest Service, U.S. Nuclear Regulatory Commission, Pennsylvania Department of Environmental Resources, Pennsylvania Fish Commission, Missouri Department of Conservation, Colorado Division of Wildlife, Illinois Department of Conservation, Virginia Commission of Game and Inland Fisheries, and the Western Pennsylvania Conservancy.

Special thanks are due many for their support in this program and development of the workbook. In particular, I would like to recognize and thank for their assistance and helpful comments: Charles Cushwa, Gene Ludlow, Henry Gerke, James Brown, Glenn Gravatt, David Putnam, Jerry Touval, David Reese, John Forren, Richard Heaslip, Stephen Miller, Robert Brooks, Joseph Barnard, Richard Roth, Edwin Pentecost, Germain LaRoche, Daniel Devlin, Richard Croop, Ken Hickok, Paul Steblein, Jerry Hassinger, John Kriz, Bill Palmer, Bill Shope, Calvin Butchkoski, Jerry Wunz, Arnie Hayden, Fred Hartman, John Dunn, Gregory Grabowicz, John Byerly, Frank Mazzotti, and Bruce Anderson.

Special recognition and thanks are due to Arlene Miller and Joan Mehaffey for their patience, perserverance, and typing and editorial skills that permitted completion of this workbook.

SPECIES WORKBOOK

Table of Contents

GENERAL INSTRUCTIONS

This Species Workbook has been developed to compile information in a standard format for the Pennsylvania Fish and Wildlife Data Base. The Data Base is a computerized library of species information that is keyword searchable, providing instant access to information for 840+ animals occurring in Pennsylvania. The Data Base provides an important focus for storing and acces sing animal for Pennsylvania species. Game Commission personnel and others use this Data Base for environmental assessments, habitat evaluation and management, species management research, wildlife extension, and education.

This workbook has been designed for compiling a complete, concise profile of the distribution, status, biology, and management of the species. You will find several "narrative" and "checklist" sections in this workbook, with specific instructions accompanying each section. Most of the reference materials required to complete a section have been incorporated into the instructions and checklists. Additional materials or references that might be required to correctly complete a section, but were too voluminous or inappropriate to include in the workbook, are included in the Species Workbook Supplemental Manual.

Some of the information requested in sections of the workbook will appear to be duplicated; therefore, it is important to understand the different functions of the narrative sections and checklists.

Narratives

The narratives should be written in a flowing, readable format. They should provide quick, fully referenced, documentation to the Data Base user for environmental assessments, planning decisions, etc. The narratives should be written to stand alone; that is, even if the information is requested again in a summary checklist, it is essential that all relevant/appropriate information for the topic be included in the narrative text. An individual retrieving narrative information from the Data Base probably will not have viewed any of the checklist information.

All information presented in these narratives must be referenced. Assign each reference a numerical code (sequentially beginning with 01, based upon order of appearance in the text); then record the complete citation in the REFERENCE section of this workbook. Use these codes along with the page numbers in the citation throughout the narratives to indicate the sources for each item of information; e.g., this species deposits eggs in warm, well-drained, sandy soils (03:14, 14:350-353, 15:4-5).

When completing the narratives (and other sections requesting text), it is preferred that the information first be drafted and then typed or neatly printed in the workbook. Slash all zeros ("0") to prevent confusion with the letter "O". These steps will greatly decrease the incidence of keypunch errors when the information is entered into the computer.

Summary Checklists

The checklists are designed to summarize selected information in the narratives into standardized keywords to allow rapid retrievals from the Data Base. Many of the checklist codes/words are established standards used by other agencies. By using these standards, the checklists will permit specific retrievals from the Data Base; e.g., what species occur in palustrine wetlands? These standard keywords also are useful for crosswalking to other existing databases or mapping systems and for regional/national summaries.

Use your professional judgment to resolve cases in which there may be overlap or gray areas in the checklists. If a species relationship to a standard code/word is uncertain, it is better to indicate a positive connection rather than not indicate it and not be able to retrieve the species in situations involving that code/word. Remember, the narratives will always serve as the definitive source for describing the species.

STATUS

A. Status Narrative

Develop a narrative profile describing the current legal and use status of this species in the Commonwealth of Pennyslvania. If the species is recognized as endangered, threatened, or a species of special concern, indicate the reasons for the special status and factors that may be threatening to populations of the species. For federally listed species, include the date of listing, whether or not a federal recovery plan exists, and where designated critical habitats have been identified in Pennsylvania. Also, indicate all federal and state agencies that have executive, legislative, or other designated responsibilities for this species and describe the nature of this responsibility following the agency name. Provide appropriate reference codes including page number(s) for all information, and record the complete citation in the REFERENCE section at the back of this workbook.

Note: In developing this narrative, it may be helpful to be aware of the status categories that are included in the checklist that follows.

B. References for Status (enter the reference codes for all references used in compiling the entries in this section, separate each reference code with a comma):

_____

_____

_____

C. Status Checklist

Check all the status categories that apply to the species.

Code	Status	Definition
__ F-E	Federal Endangered	Species is officially classified by the Federal Government as being in danger of extinction throughout all or a significant part of its range. (Consult the Federal Register listing in the Species Workbook Supplemental Manual.)
__ F-T	Federal Threatened	Species is officially classified by the Federal Government as being likely to become endangered within the foreseeable future throughout all or a significant part of its range. (Consult the Federal Register listing in the Species Workbook Supplemental Manual.)
__ F-P	Federal Proposed	Species is officially identified by the Federal Government as being threatened and has been proposed for listing. (Consult the Federal Register listings in the Species Workbook Supplemental Manual.)
__ F-C	Federal Candidate	Species is officially identified by the Federal Government as under review or consideration for listing as an endangered or threatened species. (Consult the Federal Register listings in the Species Workbook Supplemental Manual.)
__ S-E	State Endangered	Species is officially classified by the responsible State Government agency (Game Commission or Fish Commission) as endangered.
__ S-T	State Threatened	Species is officially classified by the responsible State Government agency (Game Commission or Fish Commission) as threatened.

Code	Status	Definition
__ S-SC	State Special Concern Species	Species is officially classified by the responsible State Government agency (Game Commission or Fish Commission) as a species of special concern.
__ S-SU	State Status Undetermined	Species is officially recognized by the responsible State Government agency (Game Commission or Fish Commission) as status undetermined or status indeterminate.
__ S-X	State Extirpated	Species is officially classified by the responsible State Government agency (Game Commission or Fish Commission) as extirpated. These generally include species that have disappeared from Pennsylvania, but still exist elsewhere. For birds, includes species that do not presently nest in Pennsylvania, but did at one time.
__ MIGRATORY	Federal Migratory	Species is officially recognized by the Federal Government as a migratory bird in 50 CFR. (Consult the Species Workbook Supplemental Manual for a complete listing.)
__ COMMERCIAL	Commercial	Species is commercially harvested for fur or flesh value.
__ CONSUMP-REC	Consumptive Recreational	Species is harvested recreationally for fur, flesh, or trophy value and its defined as such by State or Federal Law; may be officially classified as "protected", "nongame", or "wild" animal.
__ NON-CONSUMP-REC	Non-consumptive Recreational	Species is not defined by State or Federal law as a species to be harvested recreationally; may be officially classified as "protected", "nongame", or "wild" animal.
__ INDICATOR	Biological Indicator	Species whose occurrence indicates environmental quality (e.g., presence indicates low levels of dissolved oxygen).
__ SENSITIVE	Sensitive	Species especially susceptible to environmental perturbation (e.g., raptor breeding success has been closely tied to pesticide application and exposure).
__ UNCLASSIFIED	Unclassified	Species has no recognized status in the Commonwealth of Pennsylvania or its status does not correspond to any of the above categories.

SPECIES DISTRIBUTION

The following sections have been designed to record the species distribution in the Commonwealth of Pennsylvania. First, the species distribution should be described in "narrative" form. Each item of information presented in this narrative should be referenced in the Narrative Reference section. After the narrative is completed, this information can then be used to fill out the remaining distribution sections [County distribution, distribution by watershed (OWDC Hydrologic Units), 1:24,000 scale USGS maps, latitude/longitude point locations, etc.].

Consider and use the following DEFINITIONS in completing the distribution section of this workbook:

Occurrence - a species occurs in an area if it breeds, winters, or significantly uses habitat in that area. A species would occur in an area if the animal occurs there sometime during the year and the presence of that area served some vital or essential role in the animal's life cycle (even though habitat utilization may not be considered great). When defining the species occurrence, remember that you are specifying those areas in which the species will be considered in environmental studies, research project planning, management planning, etc.

The following values will be used in recording species occurrence geographically in the Commonwealth: known to occur, known not to occur, occurrence is unknown. Use the following guideline and definitions to interpret reports and other data sources for recording species distribution and occurrence:

Known to occur: a species has "known" occurrence in an area if there exists recorded sightings, specimen data, and documentation/evidence that suggest occurrence (e.g., sightings in an area of previously documented ocurrence), or documentation/evidence judged by professional, expert opinion to be valid. Range maps might, but do not necessarily, qualify or meet these criteria. Occurrence must qualify as defined above.

Known not to occur: a species is "known not to occur" in an area, i.e., area is outside the range of the species distribution. This value only applies for County Distribution.

Unknown: a species occurrence in the area is unknown, i.e., unable to determine from the available information base or from expert opinion whether species occurrence is "known" in an area or whether the species is "known not to occur" in an area.

A. Distribution Narrative

The Distribution Narrative section is provided for compiling a complete profile of the species distribution within Pennyslvania. The schematic below is provided for mapping the species distribution.

This narrative will provide the core or base for data recorded in subsequent distribution sections and the database. Individuals accessing the database should find in this narrative a complete and concise description of known locations of the species and/or populations of the species, and be able to discern breeding locations, wintering locations, and areas of migratory occurrences.

In the first paragraph, provide a brief description of the species current and historic distribution in the Commonwealth. (This paragraph should be brief and concise, not exceeding 3-4 sentences or 10 lines of text.) In the next paragraphs, highlight areas of year-round occurrence, seasonal occurrence, and migratory occurrence. If the species is migratory only in Pennsylvania, indicate the general migratory movement pattern (e.g. by major water drainage or mountain chain) and general dates of movement.

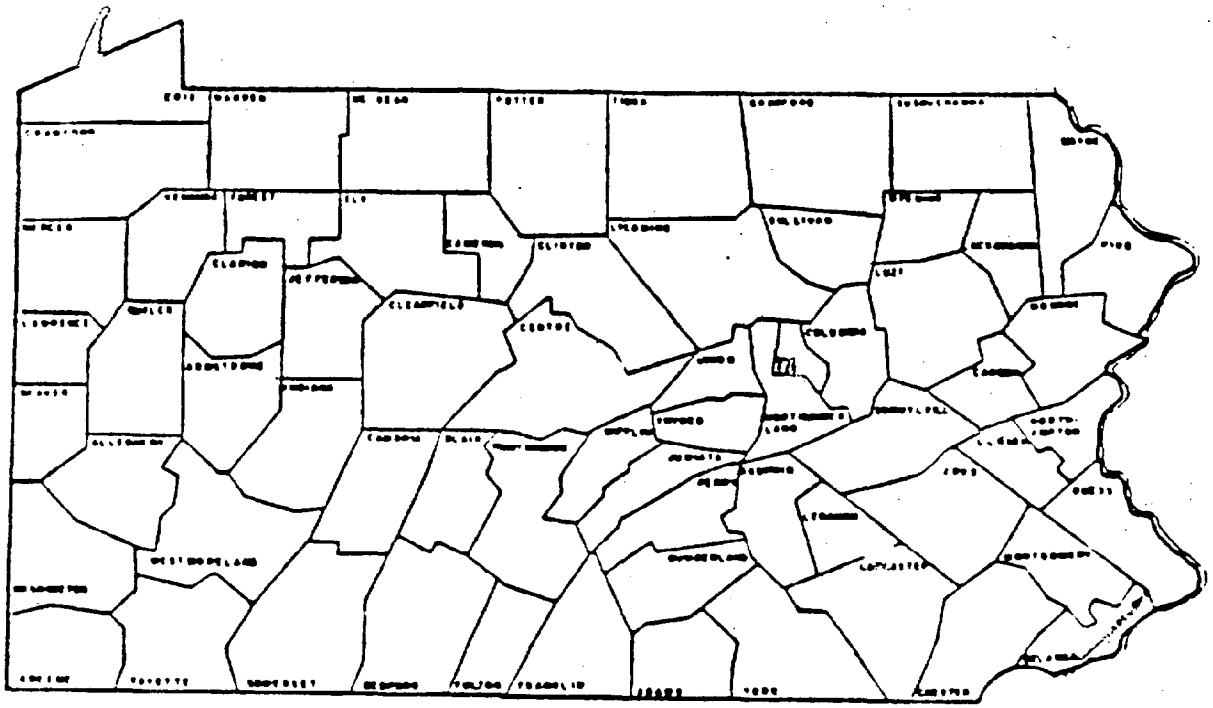
When describing the species distribution in these paragraphs, first indicate the general area of occurrences (region, county, watershed, national forest, game lands, state park/forest, etc.), then record information (if feasible) on site locations using reference points such as cities, roads/mileposts, topographic features/elevations, rivers/streams/reservoirs, quads, latitude/longitude, UTM coordinates, etc.

Be sure that possible occurrence (speculation and professional opinion) is noted as such, and that the occurrence type or mode is indicated (i.e., breeds in the following locations: . . .; winters in the following locations: . . ., etc.). Information related to relative abundance might also be included when available.

If precise distribution is considered too sensitive or secure to present in this workbook and the database give the name, title, affiliation, address, and business telephone number of the person(s) maintaining this information. Make certain that the individual(s) is consulted prior to providing the information.

Be certain to follow each item of distribution information with the reference code indicating the source of information, e.g., "known to occur in southeastern Pennsylvania in the counties of Chester, Delaware, and Berks (03:21, 05:14-16, 11:140)." Note that persons providing expert opinion/interpretation are considered a reference and should be assigned a reference code and cited in the REFERENCE section at the back of this workbook.

Map the species distribution below and narratively describe the distribution as instructed above in the space provided below and on the following pages.



Area location

Point location

FOR BIRDS ONLY

Breeding locations

Wintering locations

Migration corridors

In North America, the Brant ranges mainly along the Atlantic Coast (Ø3:74). Distribution maps may be found in Robbins (Ø1:4Ø) and Peterson (Ø8:map 22).

According to the A.O.U., the Brant: breeds in North America from Prince Patrick, Melville and Ellesmere islands south to Northern Keewatin (Adelaide Peninsula), Prince of Wales Island (probably), and Southampton, Coats and western Baffin islands, and in the Paleartic in northern Greenland, Spitsbergen and Franz Josef Land; and in North America from western (Kuskokwim Bay) and northern Alaska east to northern Mackenzie and Banks, Melville and Prince Patrick islands (probably also Victoria Island), and in the Paleartic along the coast of Siberia east to the Chukotski Peninsula and Anadyrland (Ø9:68-69).

B. References for Distribution (enter the reference codes for all references used in compiling the entries in this section, separate each reference code with a comma):

C. Statewide Resident Status

Check the one category that best describes the species' resident status in the Commonwealth.

	Code	Status	Definition
__	RES-B	Breeding Resident Only	Species primarily present during the breeding season only.
__	RES-W	Winter Resident Only	Species only present during most or all of the winter months.
__	RES-YR	Year-round Resident	Species breeds in Pennsylvania and is present year-round.
__	MIGRANT	Migratory Species	Species does not occur in Pennsylvania year-round or for an extended time period as described above, (i.e. is not a breeding or winter resident). Pensylvania is used only as a migration corridor.
__	UNKNOWN	Unknown	Species for which so few records exist in Pennsylvania that it cannot be classified into a different resident status cateogory.

D. Distribution by County

Complete the table that follows indicating species occurrence at the county level, seasonal occurrence within the counties in which the species "occurs", and species relative abundance within counties in which the species "occurs". Your entries in this table must correspond with information presented in the Distribution Narrative (Section A). Use the following codes and definitions in completing the table.

1. Occurrence codes and definitions are those defined earlier in the definitions.

Occurrence Codes

O - Known to occur
N - Known not to occur
X - Occurrence is unknown

2. Seasonal occurrence codes should be entered for counties in which the species is "known to occur". If the species does not occur in a county, or its occurence in a county is unknown, do not make an entry in that county blank for seasonal occurrence.

Seasonal Occurrence Codes

S... - Spring Migration only
SB.. - Spring Migration/Breeding Season
S.F. - Spring Migration/Fall Migration
S..W - Spring Migration/Winter Season
SBF. - Spring Migration/Breeding Season/Fall Migration
SB.W - Spring Migration/Breeding Season/Winter Season
S.FW - Spring Migration/Fall Migration/Winter Season
.B.. - Breeding Season only
.BF. - Breeding Season/Fall Migration
.B.W - Breeding Season/Winter Season
.BFW - Breeding Season/Fall Migration/Winter Season
..F. - Fall Migration only
..FW - Fall Migration/Winter Season
...W - Winter Season only

SBFW - Year-round Resident

XXXX - Occurrence in the county by season is unknown

3. Abundance codes should be entered for counties in which the species is "known to occur". If the species does not occur in a county, or its occurrence in a county is unknown, do not make an entry in that county blank for relative species abundance.

Abundance Codes

A - abundant (occurs regularly or in large numbers in appropriate habitat or season or is frequently observed)
C - medium abundance (i.e., common - occurs in small numbers in appropriate habitat or season; observed occasionally in prime habitat)
U - low abundance (i.e., uncommon - occupies a small percentage of suitable habitat; occupies a very specific limited habitat; very few individuals observed in prime habitat)
X - abundance in county is unknown

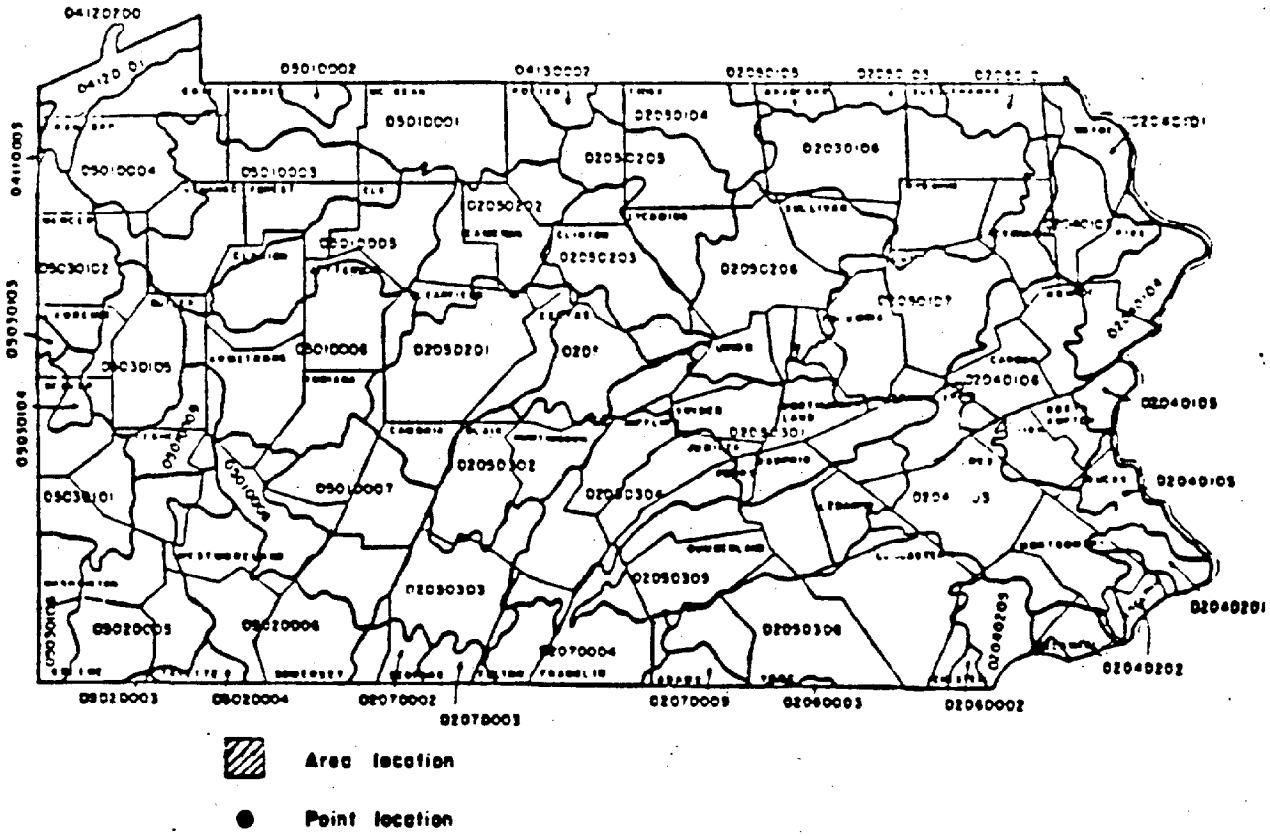
General Distribution

E. Distribution by Office of Water Data Coordination (OWDC) Hydrologic Units in Pennsylvania

NOTE: OWDC hydrologic units refer to watersheds in the state, not aquatic habitats only; therefore, complete this section for all species. For bird species, entries should correspond with "resident" occurrence (breeding, wintering, year-round occurrences).

Using the map provided below (or the large scale - 1:500,000 USGS Hydrologic Unit Map of Pennsylvania) and the checklist on the next two pages, check all the OWDC hydrologic units (watersheds) in which the species "occurs". If the species is found statewide and in all watersheds, check "all" at the top of the list. Your entries should correspond with county level occurrence information (Section D) and the Distribution Narrative (Section A).



E. Distribution by OWDC Hydrologic Units (continued)

___ Species occurs in all OWDC hydrologic units to cataloging unit level as displayed on the USGS Hydrologic Unit Map.

Species does not occur statewide (i.e., in all OWDC hydrologic units), but occurs in the following units:

	Code	Definition
___	02040101	Upper Delaware:Upper Delaware
___	02040103	Upper Delaware:Lackawaxen
___	02040104	Upper Delaware:Middle Delaware-Mongaup-Brodhead
___	02040105	Upper Delaware:Middle Delaware-Musconetcong
___	02040106	Upper Delaware:Lehigh
___	02040201	Lower Delaware:Crosswicks-Neshaminy
___	02040202	Lower Delaware:Lower Delaware
___	02040203	Lower Delaware:Schuylkill
___	02040205	Lower Delaware:Brandywine-Christina
___	02050101	Upper Susquehanna:Upper Susquehanna
___	02050103	Upper Susquehanna:Owego-Wappasening
___	02050104	Upper Susquehanna:Tioga
___	02050105	Upper Susquehanna:Chemung
___	02050106	Upper Susquehanna:Upper Susquehanna-Tunkhannock
___	02050107	Upper Susquehanna:Upper Susquehanna-Lackawanna

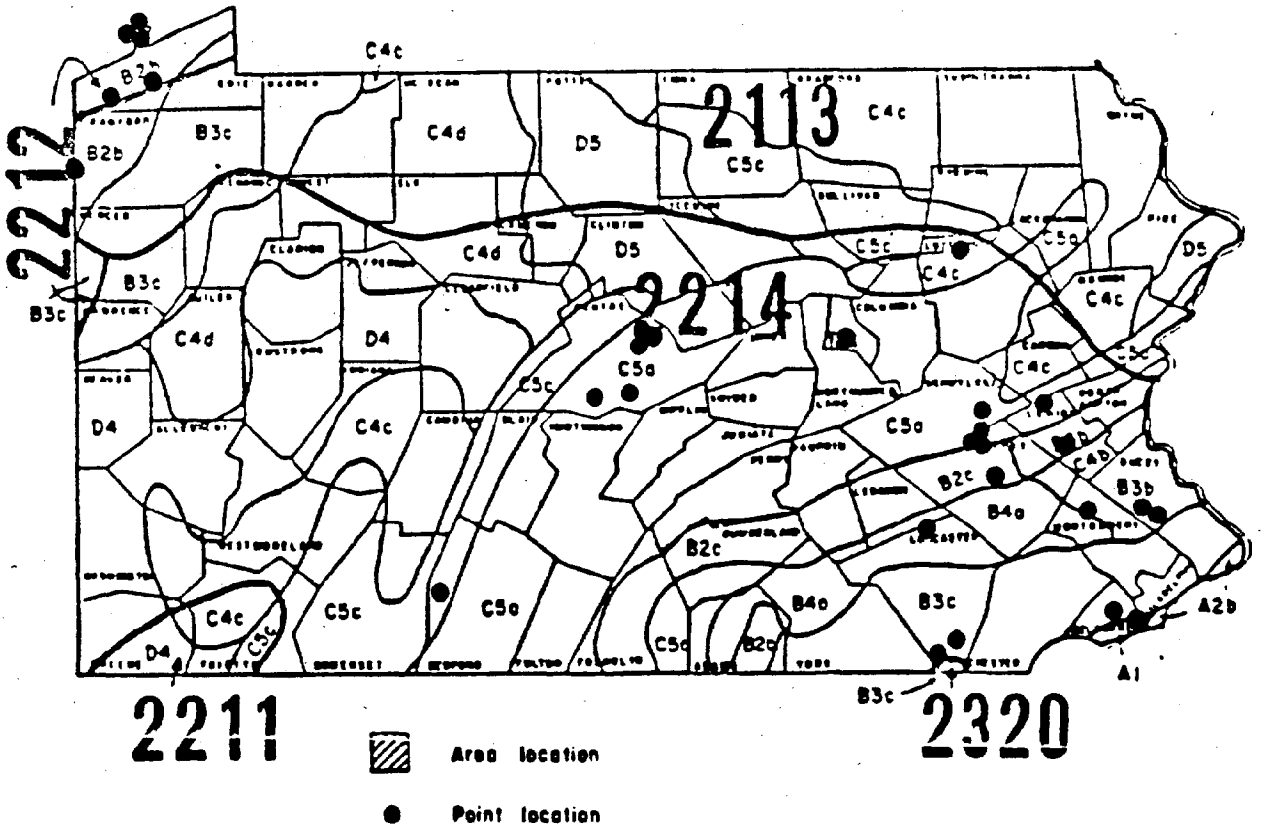
__	05030105	Upper Ohio:Connoquenessing
__	05030106	Upper Ohio:Upper Ohio-Wheeling

F. Distribution by Ecoregions and Land Surface Forms in Pennsylvania

NOTE: Complete this section for all species.

Ecoregions are designed to stratify ecologically similar areas based on vegetation, soils, climate, and other factors. They are named after a vegetation type characteristic of the area and secondarily by landform. Although an animal species may not specifically associate with the particular vegetation type and/or landform used to name a region (e.g. Appalachian Oak Forest, High Hills), if it "occurs" in that map unit, it should be marked as occurring in that ecoregion.

Using the ecoregion map provided below and the checklist on the next page, check all ecoregions in which the species "occurs". For descriptions and definitions consult the explanatory notes in the Species Workbook Supplemental Manual. Bird species entries should correspond with "resident" occurrence (i.e., breeding, wintering, year-round occurrences). All entries should correspond with county level occurrence information (Section D), and the Distribution Narrative (Section A).



F. Distribution by Ecoregions and Land Surface Forms in Pennsylvania (cont.)

__ Species occurs in all Ecoregions and Land Surface Forms in Pennsylvania as displayed on the preceding map.

Species does not occur statewide (i.e., in all Ecoregions and Land Surface Forms in Pennsylvania), but occurs in the following units:

	Code	Definition
__	2113B2b	Northern Hardwoods Forest, 50-80% gently sloping, 100-300 ft. elevation, 50-75% of gentle slope is in lowland
__	2113B3c	Northern Hardwoods Forest, 50-80% gently sloping, 300-500 ft. elevation, 50-75% of gentle slope is on upland
__	2113C4c	Northern Hardwoods Forest, 20-50% gently sloping, 500-1000 ft. elevation, 50-75% of gentle slope is on upland
__	2113C4d	Northern Hardwoods Forest, 20-50% gently sloping, 500-1000 ft. elevation, more than 75% of gentle slope is on upland
__	2113C5a	Northern Hardwoods Forest, 20-50% gently sloping, 1000-3000 ft. elevation, more than 75% of gentle slope is in lowland
__	2113C5c	Northern Hardwoods Forest, 20-50% gently sloping, 1000-3000 ft. elevation, 50-75% of gentle slope is on upland
__	2113D5Ø	Northern Hardwoods Forest, less than 20% gently sloping, 1000-3000 ft. elevation
__	2211C4c	Mixed Mesophytic Forest, 20-50% gently sloping, 500-1000 ft. elevation, 50-75% of gentle slope is on upland
__	2211C5c	Mixed Mesophytic Forest, 20-50% gently sloping, 1000-3000 ft. elevation, 50-75% of gentle slope is on upland
__	2211D4Ø	Mixed Mesophytic Forest, less than 20% gently sloping, 500-1000 ft. elevation
__	2212B2b	Beech-Maple Forest, 50-80% gently sloping, 100-300 ft. elevation, 50-75% of gentle slope is in lowland
__	2212B3c	Beech-Maple Forest, 50-80% gently sloping, 300-500 ft. elevation, 50-75% of gentle slope is on upland
__	2214A1Ø	Appalachian Oak Forest, more than 80% gently sloping, 0-100 ft. elevation
__	2214A2b	Appalachian Oak Forest, more than 80% gently sloping, 100-300 ft. elevation, 50-75% of gentle slope is in lowland
__	2214B2c	Appalachian Oak Forest, 50-80% gently sloping, 100-300 ft. elevation, 50-75% of gentle slope is on upland
__	2214B3b	Appalachian Oak Forest, 50-80% gently sloping, 300-500 ft. elevation, 50-75% of gentle slope is on lowland
__	2214B3c	Appalachian Oak Forest, 50-80% gently sloping, 300-500 ft. elevation, 50-75% of gentle slope is on upland
__	2214B4a	Appalachian Oak Forest, 50-80% gently sloping, 500-1000 ft. elevation, less than 75% of gentle slope is in lowland
__	2214C4c	Appalachian Oak Forest, 20-50% gently sloping, 500-1000 ft. elevation, 50-75% of gentle slope is on upland

F. Distribution by Ecoregions and Land Surface Forms in Pennsylvania (cont.)

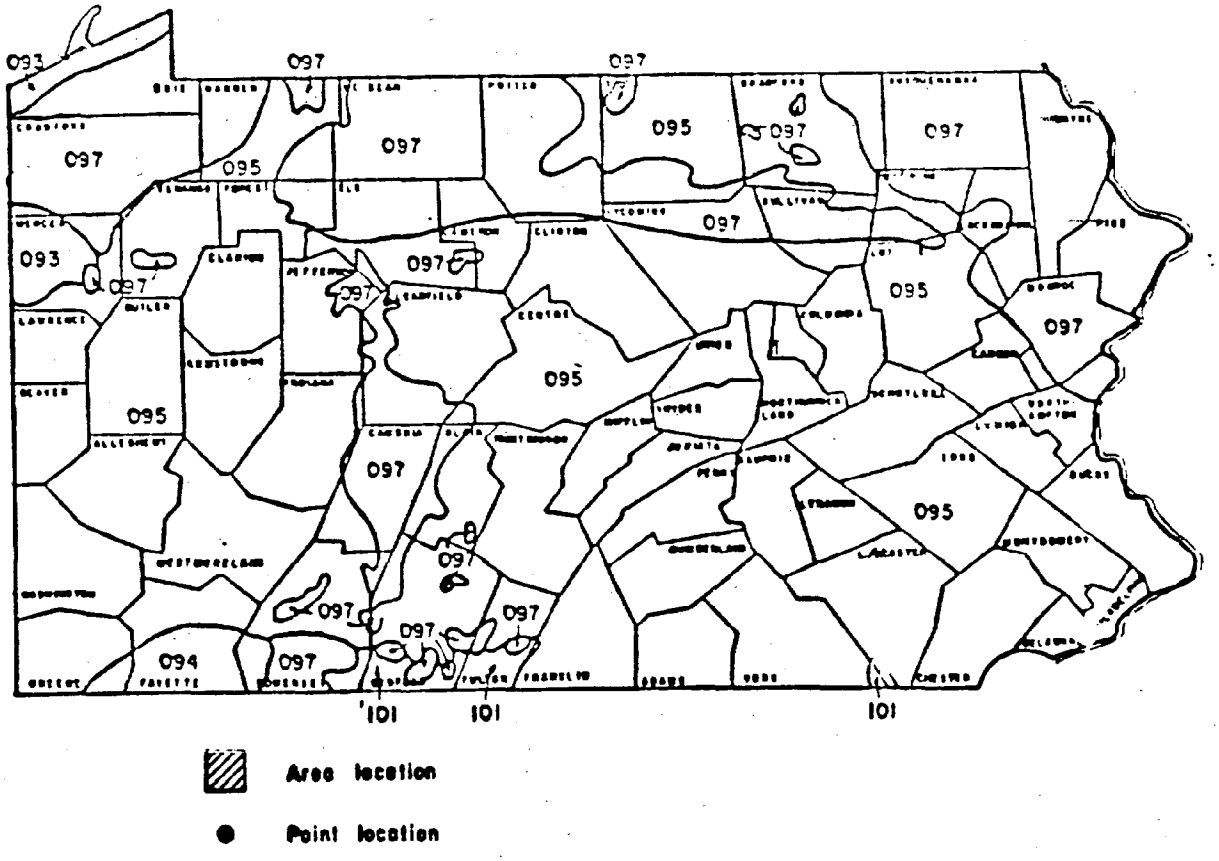
	Code	Definition
__	2214C4d	Appalachian Oak Forest, 20-50% gently sloping, 500-1000 ft. elevation, more than 75% of gentle slope is on upland
__	2214C5a	Appalachian Oak Forest, 20-50% gently sloping, 1000-3000 ft. elevation, less than 75% of gentle slope is in lowland
__	2214C5c	Appalachian Oak Forest, 20-50% gently sloping, 1000-3000 ft. elevation, 50-75% of gentle slope is on upland
__	2214D4Ø	Appalachian Oak Forest, less than 20% gently sloping, 500-1000 ft. elevation
__	2214D5Ø	Appalachian Oak Forest, less than 20% gently sloping, 1000-3000 ft. elevation
__	2320B3c	Southern Mixed Forest, 50-80% gently sloping, 300-500 ft. elevation, 50-75% of gentle slope is on upland

G. Distribution by Potential Natural Vegetation Types in Pennsylvania

NOTE: Complete this section for all species.

Potential natural vegetation types are vegetation types that would exist today if man were removed and plant succession after his removal were telescoped into a single moment; however, the effects of man's earlier activities are permitted to stand. As such the potential natural vegetation type portrays the biological potential of a site.

Using the map provided below and the checklist on the next page (or a large scale USGS map of potential natural vegetation types), identify all the potential natural vegetation types in which the species "occurs". Bird species entries should correspond with resident occurrence (i.e., breeding, wintering, year-round occurrences). Keep in mind that if the species "occurs" in the map unit, it should be marked as occurring in the potential natural vegetation type. All entries should correspond with county level occurrence information (Section D) and the Distribution Narrative (Section A).



G. Distribution by Potential Natural Vegetation Types in Pennsylvania (cont.)

___ Species occurs in all Potential Natural Vegetation types in Pennsylvania as displayed on the preceding page.

Species does not occur statewide (i.e., in all Potential Natural Vegetation types in Pennsylvania), but occurs in the following types:

	Definition
___	Beech-Maple Forest
___	Mixed Mesophytic Forest
___	Appalachian Oak Forest
___	Northern Hardwoods
___	Oak-Hickory-Pine Forest

Site-Specific Distribution

H. Distribution by 7 1/2' Quadrangles

NOTE: Complete this section for all species.

Using the U.S. Geological Survey Index to Topographic Map Coverage in Pennsylvania provided in the Species Workbook Supplemental Manual, identify the seven (7) digit USGS 7 1/2' quadrangle code(s) and names that define the species occurrence within the Commonwealth of Pennsylvania. The format for quadrangle codes is as follows:

__/___/_/_
LAT LONG UP OVER
(N) (W)

The first two digits indicate the reference point latitude in degrees; the third, fourth, and fifth digits indicate the reference point longitude (values are right-justified - all longitudes in PA. would begin with 0, e.g., 80 would be 080); the sixth digit is the vertical one-degree row number counting up from the reference point; and the seventh digit is the horizontal one-degree cell counting over from the vertical row number. This is diagrammatically described in the appendix to the USGS 7 1/2' (1:24,000) series Quadrangle Map in the Species Workbook Supplemental Manual.

All entries should correspond with occurrence information provided in the Distribution Narrative (Section A).

****

__ Species occurs in <u>all</u> 7 1/2' quadrangles in Pennsylvania.

Species does not occur statewide, but occurs in the following quadrangle:

I. Distribution by Latitude and Longitude

NOTE: Complete this section for 1) special status species, including federal and/or state designations of endangered, threatened, species of special concern, status undetermined, and status indeterminate, and 2) species with a limited resident distribution in Pennsylvania (i.e., species occurring in less than 5% of Pennsylvania counties).

This section is divided into two data entry parts - in part one point locations should be entered and/or the second part enter a series of latitude/longitude points that enclose an area or polygon in which the species occurs.

Latitude and longitude are to be expressed in degrees, minutes, and seconds. Examples are: latitude 03°20'10", longitude 096°36'15". Latitude and longitude should be entered in the following parts as a string separated by commas (e.g., 0320100963615,0320100953620, etc.).

All entries in this section should correspond with occurrence information provided in the Distribution Narrative (Section A).

1. Point Locations - this should be used for species of very limited distribution to designate occurrence (e.g. bald eagle nests, Indiana bat caves, etc.). Separate each latitude/longitude string (13 characters) with a comma.

LATITUDE	LONGITUDE		LATITUDE	LONGITUDE		LATITUDE	LONGITUDE	
		,			,			,
		,			,			,
		,			,			,
		,			,			,
		,			,			,
		,			,			,

2. Polygon or Areal Locations - use this part to describe a more widespread species, or a species of more general occurrence (but still falling into one of the above special status designations). Most appropriately describe the boundary using a series of latitudes and longitudes that encompass a number of point locations that are clustered should fully define the species areas of occurrence in regions of the State.

POLYGON #7:

POPULATION CHARACTERISTICS (STATEWIDE)

Complete the following checklists. These checklists are used to summarize information in a consistent format with standard definitions facilitating automated data element search and retrieval.

Checklist entries should be consistent with the information presented in the distribution narrative. Check all categories and values in a category that apply.

A. Population Trend (Statewide)

__ Increasing
__ Stable
__ Decreasing
__ No trend

B. Reasons for Population Trend

__ Low Reproductive Potential
__ Periphery of Range
__ Overharvesting
__ Disease
__ Predation
__ Environmental Contaminants
__ Herbicides
__ Pesticides/Insecticides
__ Habitat Loss
__ Habitat Improvement
__ Range Expansion (Habitat Addition)
__ Underharvesting
__ High Reproduction
__ Seasonal and Catastrophic Weather Conditions
__ Interspecific Competition
__ Intraspecific Competition

C. Population Potential Through Habitat Manipulation

__ Increase <10%
__ Increase 10-25%
__ Increase >25%
__ Decrease <10%
__ Decrease 10-25%
__ Decrease >25%

ORIGIN

In the following section, describe the species origin within Pennsylvania. (Use terms like native, introduced, reintroduced, exotic, etc.). If the species is not native to Pennsylvania, include descriptive information concerning the source of animals, etc. Be certain to follow each item of information with the reference code and page numbers that indicate the source of the information.

REFERENCES

Record the complete citations for the references you used to complete this booklet. If the information was from verbal communications with a recognized expert, record the individual expert's name, affiliation, and address, and date of communication. Assign each citation a two (2) digit code number for use in completing the various sections of this workbook. Enter the references used in completing this booklet in sequential order. The first reference number (00) is reserved for your name and address, telephone number, and affiliation - even if you are not referencing yourself in the remainder of the workbook.

Use the following convention when citing reference sources: Author name(s), date, title, source document, pages in source document. Specific questions should be referenced to the Data Base Manager or the CBE (Council of Biology Editors, 1978) Style Manual.

APPENDIX E

Updated species profile of the Sedge wren

040153

CAT = "04"
NAME = "WREN, SEDGE"
PHYLUM = "CHORDATA"
CLASS = "AVES"
ORDER = "PASSERIFORMES"
FAMILY = "TROGLODYTIDAE"
GENUS = "CISTOTHORUS"
SPECIES = "PLATENSIS"
AUTHORITY = "(LATHAM)"
R.TAXONOMY = "6049"
STATUS = "121,202"
".STATUS = "FEDERAL MIGRATORY,STATE THREATENED"
C.STATUS = "THE SEDGE WREN IS LISTED AS THREATENED IN PENNSYLVANIA (13 PA BULLETIN 1026). IT IS ALSO PROTECTED BY THE MIGRATORY BIRD TREATY ACT (50 CFR 1.1 PART 10.13) AND THE PENNSYLVANIA GAME LAWS AND IS LISTED AS A SPECIES OF SPECIAL CONCERN BY THE AUDUBON SOCIETY'S BLUE LIST (01:233). THE U.S. FISH AND WILDLIFE SERVICE AND THE PENNSYLVANIA GAME COMMISSION ARE RESPONSIBLE FOR THE PROTECTION AND MANAGEMENT OF THIS SPECIES. IN PENNSYLVANIA THE SEDGE WREN IS A RARE TRANSIENT AND SUMMER RESIDENT OF VERY LOCAL DISTRIBUTION AND ERRATIC OCCURRENCE, BECOMING EVEN MORE RARE IN RECENT YEARS (02:50). BOTH WARREN AND SUTTON REMARK ABOUT THE SECRETIVE NATURE OF THIS BIRD. SUTTON SAYS, "UNLESS THEY ARE SINGING OR LITERALLY KICKED OUT OF THE GRASS, THEY WILL NOT BE SEEN" (03:152). WARREN WROTE THAT HE BELIEVED IT WAS ACTUALLY MORE PLENTIFUL AND GENERALLY DISTRIBUTED THAN IT WAS THOUGHT TO BE BY NATURALISTS AND COLLECTORS (04:312). GILL (05:35) REPORTS THAT AT ONE TIME (PRIOR TO 1950), THE SEDGE WREN COULD BE FOUND, ALTHOUGH NEVER ABUNDANTLY, IN MANY LOCATIONS ACROSS THE COMMONWEALTH. SINCE THAT TIME, HOWEVER, IT HAS DISAPPEARED FROM MOST FORMER LOCATIONS AND HAS DECLINED OR BECOME SPORADIC IN OTHERS. THE LACK OF UNDISTURBED HABITAT AND CHANGING AGRICULTURAL PRACTICES MAY BE ONE FACTOR CONTRIBUTING TO ITS DECLINE. OTHER REASONS ARE UNKNOWN (05:315)."

APPENDIX F.

UPDATED SPECIES PROFILE OF THE AMERICAN SHAD.

CAT = "01"
NAME = "ALOSA SAPIDISSIMA"
PHYLUM = "CHORDATA"
GENUS = "ALOSA"
SPECIES = "SAPIDISSIMA"
STATUS = "401,221"
T.STATUS = "COMMERCIAL,GAME (CONSUMPTIVE RECREATIONAL)"
C.STATUS = "THE ANADROMOUS AMERICAN SHAD, ALOSA SAPIDISSIMA, IS A POPULAR SPORT FISH IN THE DELAWARE RIVER DURING ITS SPRING SPAWNING MIGRATION. ITS WORTH IS ESTIMATED AT SEVERAL MILLION DOLLARS, WITH THE RECREATIONAL DEMAND EXPECTED TO INCREASE IN THE FUTURE (01:10). IN 1896 THE DELAWARE RIVER BASIN CONTRIBUTED THE HIGHEST PERCENTAGE (OVER 30%) TO THE ENTIRE COASTAL COMMERCIAL CATCH (01:9). POPULATION DECLINES HAVE GREATLY REDUCED THE COMMERCIAL FISHERY (01:2). NEW JERSEY AND DELAWARE STILL MAINTAIN SMALL COMMERCIAL FISHERIES, HOWEVER, NO COMMERCIAL LANDINGS HAVE BEEN REPORTED FROM PENNSYLVANIA SINCE 1942 (01:9). THE ONLY NON-TIDAL COMMERCIAL FISHERY IS THE LEWIS FISHERY AT LAMBERTVILLE, NEW JERSEY (01:4). THE DELAWARE RIVER BASIN CATCHES GREATLY DECLINED IN THE EARLY 1900'S (01:2) DUE TO THE INTRODUCTION OF A GILL NET FISHERY, MORTALITY OF YOUNG-OF-YEAR IN ELL WEIRS, AND CONSTRUCTION OF A DAM AT LACKAWAXEN, PENNSYLVANIA IN 1823 (01:1). MORE RECENTLY, POLLUTION, CAUSING A LOW DISSOLVED OXYGEN BLOCK IN THE LOWER RIVER, IS CONSIDERED THE MOST CRITICAL LIMITING FACTOR TO AMERICAN SHAD PRODUCTION (01:4;02:II-15). IN THE LAST DECADE, SHAD POPULATIONS HAVE SIGNIFICANTLY INCREASED DUE TO A REDUCTION IN THE DURATION OF THE POLLUTION BLOCK (02:II-15). ATTEMPTS TO INCREASE THE SIZE OF THE SHAD POPULATION SHOULD FOCUS ON POINT AND NON-POINT POLLUTION CONTROL (01:8). THE SUSQUEHANNA RIVER SYSTEM ONCE SUPPORTED ONE OF THE MOST IMPORTANT SHAD FISHERIES ON THE ATLANTIC COAST (03:5), BUT THE SHAD IS NOW PROTECTED IN THIS SYSTEM (00). OVERFISHING, POLLUTION, AND DAM CONSTRUCTION RESULTED IN A POPULATION DECLINE SO THAT BY 1928 THE FISHERY WAS NONEXISTENT (03:5). RESTORATION EFFORTS HAVE BEEN UNDERWAY FOR OVER 100 YEARS (03:6) WITH LITTLE SUCCESS (00). CURRENTLY THE U.S. FISH AND WILDLIFE SERVICE, PENNSYLVANIA FISH COMMISSION, MARYLAND DEPARTMENT OF NATURAL RESOURCES, NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION, SUSQUEHANNA RIVER BASIN COMMISSION, PHILADELPHIA ELECTRIC COMPANY, PENNSYLVANIA POWER AND LIGHT COMPANY, SAFE HARBOR WATER POWER CORPORATION, AND YORK HAVEN POWER COMPANY, IN A JOINT EFFORT KNOWN AS THE SUSQUEHANNA RIVER ANADROMOUS FISH RESTORATION COMMITTEE, ARE ATTEMPTING TO REBUILD STOCKS IN THE SUSQUEHANNA RIVER BASIN THROUGH STOCKING OF FRY AND FINGERLINGS, TRAP AND TRANSPORT OF WITHIN BASIN PRE-SPAWNED ADULTS, AND TRANSFER OF OUT-OF BASIN PRE-SPAWNED ADULTS (04:II). THE DELAWARE RIVER BASIN FISH AND WILDLIFE MANAGEMENT COOPERATIVE CONSISTS OF MEMBERS FROM PENNSYLVANIA, NEW JERSEY, NEW YORK, DELAWARE, NATIONAL MARINE FISHERIES SERVICE, AND U.S. FISH AND WILDLIFE SERVICE. ITS GOAL IS TO MANAGE INTERSTATE FISHERIES RESOURCES IN THE DELAWARE BASIN. IMPLEMENTATION OF THE MANAGEMENT PLAN IS THE RESPONSIBILITY OF EACH STATE (05:II-13). THE PENNSYLVANIA FISH COMMISSION IS RESPONSIBLE FOR MANAGEMENT IN PENNSYLVANIA (00). THE SUSQUEHANNA RIVER ANADROMOUS FISH RESTORATION COMMITTEE, CONSISTING OF THE AGENCIES AND UTILITIES MENTIONED PREVIOUSLY, IS THE MAJOR DIRECTIVE BODY FOR RESTORATION EFFORTS IN THE SUSQUEHANNA RIVER (05:II-13). THE PENNSYLVANIA FISH COMMISSION, HOWEVER, IS RESPONSIBLE FOR IMPLEMENTATION OF MANAGEMENT RECOMMENDATIONS AND LEGAL ISSUES (00)."

APPENDIX G.

Updated Species Profile of the King rail.

042080

CAT = "04"
NAME = "RAIL, KING"
PHYLUM = "CHORDATA"
CLASS = "AVES"
ORDER = "GRUIFORMES"
FAMILY = "RALLIDAE"
GENUS = "RALLUS"
SPECIES = "ELEGANS"
AUTHORITY = "AUDUBON"
R.TAXONOMY = "528,4923,6049,6052,10864,11153"
C.TAXONOMY = "SUBSPECES R.E. ELEGANS OCCURS IN ILLINOIS *11153*. CONFUSION OVER RELATION TO CLAPPER RAIL OCCURRED AT ONE TIME BUT AS OF NOW RECOGNIZED AS SEPARATE SPECIES *11152,6052*."
STATUS = "121,201,223"
F.STATUS = "FEDERAL MIGRATORY,STATE ENDANGERED,NONGAME-PROTECTED"
C.STATUS = "IN 1966 ROBBINS CLASSIFIED THE KING RAIL AS BEING COMMON WITHIN ITS RANGE (01:104). ON A NATIONWIDE BASIS, THE AUDUBON SOCIETY PLACED THE KING RAIL ON THEIR BLUE LIST BETWEEN 1976 AND 1982, AS A RESULT OF DECLINING POPULATIONS. HOWEVER, IN 1986 THE SPECIES WAS SWITCHED TO THE CATEGORY OF SPECIAL CONCERN WITH POPULATIONS NOTED AS STABLE OR UP WHERE REPORTED (02:230). NO SPECIFIC PENNSYLVANIA DATA WAS CITED. ALTHOUGH THE SPECIES IS LESS COMMON NOW THAN IN THE PAST (03:304), DATA IS LACKING TO DETERMINE ANY PRESENT TREND IN THE COMMONWEALTH. THE KING RAIL IS LISTED WITH THE PENNSYLVANIA GAME COMMISSION AS BEING ENDANGERED WITHIN THE STATE (13 PA BULLETIN 1026). IT IS ALSO PROTECTED BY THE MIGRATORY BIRD TREATY ACT (50 CFR 1.1 PART 10.13) AND PENNSYLVANIA GAME LAWS. THE U.S. FISH AND WILDLIFE SERVICE AND THE PENNSYLVANIA GAME COMMISSION ARE RESPONSIBLE FOR THE MANAGEMENT AND PROTECTION OF THE KING RAIL."

C.ENVIRON.BA = "THIS SPECIES BREEDS IN THE MARSH PRAIRIE INTERFACE *4876*, ON FRESH OR BRACKISH WATER WITH ABUNDANT VEGETATION *475*. THE NEST IS USUALLY PLACED ABOVE OR NEAR THE WATER IN A CLUMP OR TUSSOCK OF THICK VEGETATION OR FRESHWATER PLANTS *431,4876*. FRESHWATER MARSHES, PONDS, SLOUGHS, MARSHY EDGES OF LAKES, SLUGGISH STREAMS AND ROADSIDE DITCHES ARE POPULAR NESTING PLACES *8872*. THE PREFERED WATER DEPTH IS SHALLOW. IN IOWA, 4|6 OF THE NESTS FOUND WHERE LAKE SEDGE PREDOMINATED *4957*. IN IOWA, THE WATER DEPTH AT THE NEST SITE IS 10.6 INCHES (MEAN) *5921*. IN ARIZONA, THIS SPECIES NESTS ABOVE 2 TO 3 INCHES OF WATER *5415*. IN ANOTHER STUDY, THE WATER DEPTH AT THE NEST SITE WAS 4 TO 18 INCHES. IN OHIO THE WATER DEPTH WAS 2 FEET, AND IN ARIZONA 6 TO 8 INCHES *4876*. IN KANSAS, THEY WERE OBSERVED MOST IN BULRUSH IN 4 TO 6 INCHES OF WATER *5806*. IN ARIZONA, THE NESTS WERE MAINLY IN ROADSIDE DITCHES, CANALS, OAT FIELDS, AND FALLOW LAND *5415*. IN ARIZONAN THIS SPECIES NESTS IN CATTAIL, SEDGE, RUSHES, AND RICE, USUALLY IN FAIRLY UNIFORM STANDS OF VEGETATION *5415*. IN ARIZONA, RICE FIELDS ARE THE OPTIMUM HABITAT, FROM THE TIME OF WATERING IN EARLY SUMMER UNTIL HARVEST IN MID-FALL *5415*."
LIFE.HIST = "PHYSICAL DESCRIPTION: THIS IS A LARGE BIRD, FROM 15 TO 19 INCHES IN LENGTH (THE SIZE OF CHICKEN). THE HEAD, NECK, AND UNDERPARTS ARE RUST, BLACK AND MOTTLED BROWN. THEY HAVE A LONG SLIGHTY CURVED BILL *528,451*. |REPRODUCTION: THIS SPECIES ARRIVES IN MINNESOTA IN MID APRIL, AND NESTING IS FROM THE 9TH TO THE 26TH OF JUNE. INCUBATION TAKES 21 TO 24 DAYS, AND BOTH SEXES INCUBATE FROM 5 TO 11 OVATE, SMOOTH, SLIGHTLY GLOSSY, PALE BUFF, SPARINGLY AND IRREGULARLY SPOTTED WITH DRAB OR BROWN, THERE IS ONLY ONE REPRODUCTIVE PERIOD IN MINNESOTA. THE AGE AT SEXUAL MATURITY IS UNKNOWN. DURING COURTSHIP, THE MALE GIVES A KIK-KIK-KIK OR JUPE-JUPE-JUPE CALL, AND WALKS WITH THE TAIL UPLIFTED AND COVERTS SHOWING. THE NEST IS MADE OF PLANTS (NARROW LEAVED EMERGENTS), IN SHALLOW MARSH COVERED BY A CANOPY. THE EGGS AVERAGE 41 BY 31 MM *475,430,700*. THIS SPECIES IS PRECOCIAL. THE NUMBER OF REPRODUCTIVE PERIODS PER YEAR IS 1, POSSIBLY 2 IN THE SOUTH *475*. THIS IS A SOLITARY NESTER. |BEHAVIOR; THE MALES BECOME VERY PUGNACIOUS, AND THEY DISPLAY BY WALKING ABOUT, WITH THE TAIL UPLIFTED, AND THE WHITE UNDERTAIL COVERTS EXTENDED. THE FEMALES DO NOT DISPLAY. COURTSHIP CONTINUES AFTER THE PAIR FORMATION. THE MALE

COMMONLY 'PRESENTS' FOOD TO FEMALE *1217,558*. THE EGGS ARE LAID IN A NEST MADE OF REEDS AND FLAGS CONCEALED IN GRASS OR SEDGE TUSSOCKS WHERE THE NESTS ARE BUILT UP ABOVE SHALLOW WATER. THE NESTS ARE OCCASSIONLY ON THE GROUND IN SLIGHT HOLLOWS SCRATCHED OUT IN A THICK CLUMP OF GRASS *430*. THEY BREED IN EXTENSIVE FRESHWATER MARSHES ALONG STREAMS, PONDS AND RIVERS, AND IN WET, GRASSY MEADOWS *430*. THE AVERAGE HEIGHT FROM THE GROUND TO THE CANOPY IN ARIZONA IS 17 INCHES TO THE RIM OF THE NEST *5415*. IN ARIZONA, THE NESTS ARE IN DRY LOCATIONS WITHIN 1 TO 2 INCHES FROM THE GROUND, BUT THEY MAY BE ELEVATED UP TO 1 FOOT, WHEN THE WATER FLUCTUATES *5415*. SOME RETURN TO SAME TERRITORY IN SUCCESSIVE YEARS *4876*. THEY BUILD A PLATFORM NEST WITH AN OUTER DIAMETER OF ABOUT 8 *507*. IN IOWA, THE MEAN DIMENSIONS WERE: HEIGHT 5.3, INSIDE DEPTH 0.4, OUTSIDE DIAMETER 11.5, INSIDE DIAMETER 8.4. *5921,4957*. THE DEFENSE IS INTRA- AND INTER-SPECIFIC *4876,1217*. THIS SPECIES WILL RETURN TO THE SAME TERRITORIES EVERY YEAR. THE TERRITORIES ARE STRIPS OF MARSH, 464 FEET LONG. THEY ARE DIURNAL, AND LEAVE MINNESOTA IN SEPTEMBER *4923*. TERRITORIALITY INCREASES DURING THE BREEDING SEASON, WITH LOWS IN THE WINTER. THE MALE ESTABLISHES AND DEFENDS THE TERRITORY *1217,475,776*. THE HOME RANGE SIZE HAS DENSITIES OF 3 NESTS PER 464 LINEAR FEET OF DITCH, 30 FEET WIDE, 30 BIRDS PER 100 ACRES OF MARSH, AND 1.69 ACRES PER NEST *475,776*. THIS SPECIES IS MOST ACTIVE PRIOR TO SUNRISE AND JUST AFTER SUNSET *430*. THEY LEAVE FOR THE WINTER GROUNDS IN LATE OCTOBER TO EARLY NOVEMBER (MAY WINTER IN VERY SOUTHEASTERN VIRGINIA AND WALLOPS ISLAND). THEY ARRIVE ON THE BREEDING GROUNDS IN MARCH OR APRIL *430,700*. THIS SPECIES PROBES WITH THE BILL, PECKING, AND IMMERSING THE HEAD AND NECK. THE PREFERED SUBSTRATE IS MARSH VEGETATION WITH VERY SHALLOW WATER (2 TO 3 INCHES), AND MUDFLATS EXPOSED BY LOW TIDE. IT FEEDS WITHIN THE BREEDING HABITAT BUT ALSO RANGES INTO NEARBY HAY AND GRAIN FIELDS *475*. THE NESTS ARE USUALLY 6 TO 18 INCHES HIGH, WOVEN OUT OF THE SURROUNDING VEGETATION AND CANOPIED. OFTEN, THEY NEST IN A HUMMOCK AMONG CATTAILS, MARSH GRASSES, RUSHES OR OTHER AQUATIC VEGETATION, WHERE THE STALKS AND LEAVES FORM A NATURAL CANOPY *451,475, 430*. THE YOUNG ARE ACTIVE RUNNERS FROM BIRTH *430*. BOTH SEXES INCUBATE THE EGGS *772*. IN ARKANSAS, THE TERRITORY CONSISTED OF SMALL STRIPS OF MARSH IN DITCHES, WITH THE BOUNDARIES FLUID DURING EARLY PAIRING ACTIVITY *1217,4876*. THE HEIGHT OF THE MIGRATION IS IN THE 1ST WEEK OF MAY, AND THEY ARE LAST SEEN SEPTEMBER 2ND *4957*. THE PAIR MAY REMAIN WITH THE BROOD MORE THAN 1 MONTH AFTER HATCHING *4876,5416*. THE HIGHEST DENSITY OF RAILS FOUND WERE WHERE THERE WAS ABUNDANT CRUSTACEANS *3787*. IN ARIZONA GRAND PRAIRIE, THERE WAS 1 NEST PER 15 ACRES ON RICE FIELDS AFTER THE HEIGHT OF THE NESTING SEASON *4876*. IN IOWA, THE MINIMUM DISTANCE BETWEEN OCCUPIED NESTS WAS 352 FEET, BETWEEN THE KING AND VIRGINIA RAIL 264 FEET AND BETWEEN THE KING AND SORA 102 FEET *5921*. ||LIMITING FACTORS: THE AMOUNT OF MARSHLAND AND WETLAND IN THE STATE IS A LIMITING FACTOR. THEY ARE A WEAK FLYER, AND PREFER TO SWIM OR RUN *430*. THIS SPECIES REQUIRES ADEQUATE VEGETATION FOR NESTING AND PROTECTION *475*. THE OAT HARVEST CULTIVATION DESTROY MANY NESTS AND YOUNG *5415*. |POPULATION PARAMETERS: MORTALITY RATES ARE UNKNOWN BUT HUNTING PRESSURE IS CONSIDERED TO BE LIGHT. THE RATE OF INCREASE IS UNKNOWN BUT POPULATIONS IN MINNESOTA ARE THOUGHT TO BE SMALL *4732*. THE SURVIVAL RATE UNTIL ABOUT 2 WEEKS OF AGE IS ABOUT 50% *4876*. |AQUATIC|TERRESTRIAL ASSOCIATIONS: THEY ARE ASSOCIATED WITH CATTAIL AND CRAYFISH *4876*. ENEMIES INCLUDE HUMAN HUNTERS, MOCCASIN SNAKE, MINK, BARRED OWL, AND THE GREAT HORNED OWL *430*. THEIR DISTRIBUTION COINCIDES CLOSELY WITH MUSKRAT, WHICH CREATES THE OPTIMUM HABITAT BY OPENING MARSHES AND PRODUCING A NETWORK OF PATHWAYS *4876*."

R.LIFE.HIST =

C.LIFE.HIST = "THE KING RAIL IS A NATIVE SPECIES, WHICH IS FOUND MAINLY IN THE EASTERN UNITED STATES AND SOUTH TO CUBA AND MEXICO. OCCURRENCE IN PENNSYLVANIA IS RARE DURING MIGRATION AND OCCASIONAL DURING SUMMER AND WINTER."

R.MGT.A = "430,528,558,4469,4923,5862,6804,11153"

R.MGT.E = "6804,11154"

C.MGT = "EXTENSIVE MARSHLANDS MUST BE PRESERVED FOR THE BENEFIT OF THIS SPECIES *430,528*. AVOID INTENSIVE AGRICULTURAL AND RECREATIONAL USES, REMOVAL OF VEGETATION ON STREAMSIDES, URBAN DEVELOPMENT, AND MAN CAUSED FLUCTUATION IN WATER LEVEL DURING BREEDING SEASON *528,430*. DRAWDOWNS SHOULD BE TIMED SO THAT SOME WATER IS AVAILABLE THROUGH THE NESTING PERIOD *5803*. IN OHIO, RAILS OCCUPIED STANDS OF NODDING SMARTWEED, WILD MILLET AND REDROOT CYPERUS IN UNITS REFLOODED WITH 6 TO 24 WATER IN MID-AUGUST *5803*. IN SOUTHEAST MISSOURI, RAILS AND SHOREBIRDS WERE SELECTIVELY ATTRACTED TO MAN-MADE WETLANDS. SHALLOW FLOODING (5 TO 15CM) OF MOIST SOIL PLANTS IN SEPTEMBER TO OCTOBER AND LATE MARCH TO EARLY MAY ATTRACTED SORAS AND VIRGINA RAILS. MANAGEMENT FOR SPRRING MIGRANTS IS SUCCESSFUL ONLY IN VEGETATION TYPES THAT PROVIDE EMERGENT COVER, AND PLANT SPECIES COMPOSITION APPEARED TO HAVE LITTLE IMPACT. FOR SPRING MIGRANTS, YOU NEED LATE FALL AND WINTER DRAWDOWN OF EARLY SUCCESSIONAL ANNUAL GRASSES, OR A SELECTION OF LATER SUCCESSIONAL STAGE SEDGES, RUSHES, AND WOODY SHRUBS. RAIL AND SHOREBIRD MANAGEMENT ARE MUTUALLY EXCLUSIVE. THE REGULAR USE OF ONE IMPOUNDMENT BY BOTH RAILS AND SHOREBIRDS MIGHT BE OBTAINED IN THE FALL BY DISKING A HIGHER ELEVATION OF UNIT AND LEAVING THE VEGETATION STANDING IN LOW AREAS. IF THE DISKED PORTIONS ARE THEN FLOODED TO THE APPROPRIATE DEPTH FOR SHOREBIRDS, THE WATER DEPTHS IN THE LOWER, VEGETATED PORTIONS WILL PROBABLY BE SUITABLE FOR RAILS. LATE SUMMER FLOODING FOR SOUTH BOUND RAILS EFFECTIVELY SET BACK SUCCESSION ON ONE PLOT. THE SUGGESTED PHENOLOGIC CLUES FOR MANAGEMENT IN SOUTHEAST MISSOURI ARE: MANIPULATIONS TO ATTRACT SPRING MIGRANTS SHOULD BE UNDERWAY WHEN E. COTTONWOOD AND RED MAPLE REACH PEAK BLOOMING, AREAS FLOODED FOR SPRING RAILS CAN BE DEWATERED WHEN F. DOGWOOD FINISHED BLOOMING, IMPOUNDMENTS FOR SOUTHBOUND RAILS SHOULD BE FLOODED AS AMERICAN LOTUS& TRUMPET CREEPER COMPLETE BLOSSOMING, AND CAN BE DEWATERED WHEN GOLDENROD BLOSSOMS DEGENERATE *5631*."

APPENDIX H.

Updated Species Profile of the Striped bass.

CAT = "01"
NAME = "BASS, STRIPED"
PHYLUM = "CHORDATA"
CLASS = "OSTEICHTHYES"
ORDER = "PERCIFORMES"
FAMILY = "PERCICHTHYIDAE"
GENUS = "MORONE"
SPECIES = "SAXATILIS"
AUTHORITY = "(WALBAUM)"
R.TAXONOMY = "795,816,842,1246,8285,9540,10864"
C.TAXONOMY = "THIS SPECIES IS IN THE FAMILY OF TEMPERATE BASSES AND APPEARS IN EARLIER LITERATURE AS ROCCUS LINEATUS *816,795*."
STATUS = "123,401"
T.STATUS = "SPORT FISH,COMMERCIAL"
C.STATUS = "THE STRIPED BASS, MORONE SAXATILIS (WALBAUM, 1792), IS AN IMPORTANT COMMERCIAL AND SPORT FISH OVER MUCH OF ITS RANGE (01:697). IT IS AN ANADROMOUS ATLANTIC COASTAL SPECIES, HOWEVER, IT HAS BEEN WIDELY TRANSPLANTED (02:576). ATLANTIC COAST STOCKS HAVE DECLINED GREATLY SINCE THE 1970'S PROMPTING FEDERAL ACTION IN THE FORM OF THE ATLANTIC STRIPED BASS CONSERVATION ACT OF 1984. THIS ACT ALLOWS FEDERAL IMPOSITION OF A MORATORIUM ON FISHING IN STATES NOT COMPLYING WITH THE INTERSTATE FISHERIES MANAGEMENT PLAN FOR STRIPED BASS, WRITTEN BY THE ATLANTIC STATES MARINE FISHERIES COMMISSION (03:1-4). SOME STATES HAVE INSTITUTED AT LEAST PARTIAL MORATORIA ON STRIPED BASS FISHING AS A RESULT OF DECLINING STOCKS (03:42). IN 1982 AND 1983 THE NATIONAL MARINE FISHERIES SERVICE WAS PETITIONED TO LIST THE CHESAPEAKE STOCK OF STRIPED BASS ON THE FEDERAL ENDANGERED AND THREATENED SPECIES LIST. HOWEVER, THE LISTING WAS DECLINED BOTH TIMES (03:4-5). IN PENNSYLVANIA, THE STRIPED BASS IS CONSIDERED A GAME FISH, AND COMMERCIAL HARVEST IS ILLEGAL (03:42). IN THE DELAWARE RIVER AND ESTUARY, RECREATIONAL FISHING IS PERMITTED, WITH A 33" MINIMUM SIZE AND 2 FISH/DAY LIMITS (04:34). INLAND WATER LIMITS ARE 15" MINIMUM SIZE AND 2 FISH/DAY (04:31). MANAGEMENT JURISDICTION OF THE ATLANTIC STRIPED BASS IS PRIMARILY THE RESPONSIBILITY OF THE INDIVIDUAL STATES (03:35) (WITHIN THE GUIDE LINES OF THE ATLANTIC STRIPED BASS CONSERVATION ACT). THE PENNSYLVANIA FISH COMMISSION HAS RESPONSIBILITY IN WATERS OF THE COMMONWEALTH (03:42)."

C.ENVIRON.BA = "THE ADULTS ARE ANADROMUS OR POTADROMOUS, SPAWNING UPSTREAM IN RIVERS, FREQUENTLY ASSOCIATED WITH THE FALL LINE *7448*. THE EGGS ARE BROADCAST IN THE CURRENT OVER A VARIETY OF SUBSTRATES *1641*. INSTEAD OF THE SPECIFIC RANGES LISTED, MISSOURI USED THE FOLLOWING TERMS: NO NOTICEABLE CURRENT, SLOW CURRENT, MODERATE CURRENT, AND/OR SWIFT CURRENT. IN NORTH CAROLINA, THEY SPAWN WHEN WATER TEMPERATURES REACH 55 TO 71 DEGREES F, WITH THE OPTIMAL TEMPERATURE BETWEEN 62 AND 67 DEGREES F *5665,5664*. IN OKLAHOMA, THEY BEGAN SPAWNING WHEN THE WATER WAS FROM 15.5 TO 18.5 DEGREES C, AND ENDED WHEN THE WATER WAS FROM 17 TO 26.5 DEGREES C *6289*. IN SOUTH CAROLINA, THE MINIMUM TEMPERATURE FOR SPAWNING WAS 58 DEGREES F *5654*. THEY SPAWN IN TRIBUTARIES TO THE RESERVOIR *5654,6289*."

LIFE.HIST = "PHYSICAL DESCRIPTION: THIS SPECIES IS ELONGATE, AND SILVERY WHITE WITH LONGITUDINAL LINES. THE DORSAL FINS ARE SEPARATE, AND THE SECOND ANAL SPINE IS SHORTER THAN THE THIRD. THE BACK OF THE TONGUE HAS TWO PATCHES OF TEETH. THE ADULT SIZE IS FROM 450 TO 2000 MM TL *9685. |REPRODUCTION: THE SPAWNING SEASON IS FROM FEBRUARY TO JULY DEPENDING ON THE LATITUDE *6595,1641*. THE EGGS HATCH IN 48 HOURS AT 17 TO 21 DEGREES C *1641*. FECUNDITY ESTIMATES VARY FROM 10000 TO 40507500 WITH AN AVERAGE OF ABOUT 700000 *1641*. THEY SPAWN ONCE A YEAR WITH SPAWNING COMPLETED WITHIN A FEW HOURS *7667,1641*. THE AGE AT MATURITY VARIES, WITH THE MALES PRIMARILY MATURE AT 2 YEARS AND THE FEMALES DURING THEIR FOURTH OR FIFTH YEAR *7667*. SPAWNING IS USUALLY NEAR THE SURFACE WITH ONE FEMALE AND UP TO 50 MALES *7667*. MOST STRIPERS OVER 11 YEARS OF AGE ARE FEMALES, AND A 29 TO 31 YEAR OLD STRIPED BASS WAS CAUGHT IN RHODE ISLAND *7667*. FEMALES REACH MATURITY AT TOTAL LENGTHS OF FROM 432 TO 457 MM, AND MALES ARE MATURE AT 174 TO 254 MM TOTAL LENGTH. THE LARVAL STAGE LASTS 35 TO 50 DAYS, AND THE LARVAE BEGIN ACTIVE FEEDING AT 8 DAYS. THE JUVENILE STAGE LASTS FROM 35 TO 50 DAYS. YOUNG FEMALES PRODUCE BETWEEN 14,000 AND 65,000 EGGS, WHILE OLDER FEMALES MAY PRODUCE UP TO 5,000,000 EGGS *2545*. SPAWNING ACTIVITY MAY SLOW FROM 1 TO 3 PEAKS. THESE PEAKS ARE APPARENTLY ASSOCIATED WITH INCREASES IN WATER TEMPERATURE *2545*. THE EGGS ARE SPHERICAL, SEMI- BUOYANT, NONADHESIVE, AND APPROXIMATELY 1.3 MM IN DIAMETER AT FERTILIZATION AT 22 DEGREES C OR ABOUT 80 HOURS AFTER FERTILIZATION AT 11 DEGREES C. THE LARVAL STAGE IS DIVIDED INTO 3 PHASES, YOLK SAC (3 TO 9 DAYS AT 5 TO 8 MM TL), FINFOLD (METAMORPHOSING STAGE 11 DAYS AT 12 MM TL), AND POST FIN-FOLD (20 TO 30 DAYS AT 20 MM TL) *2545*. THE FACTORS INFLUENCING REPRODUCTION AND SURVIVAL OF EGGS INCLUDE: (1) WATER LEVEL FLUCTUATIONS, (2) WIND AND WAVE ACTION, (3) WATER QUALITY, (4) AQUATIC AND TERRESTRIAL COVER, (5) AIR AND WATER TEMPERATURE, (6) INVERTEBRATE AND FISH PREDATION AND (7) HUMAN ACTIVITY *1272*. DURING SPAWNING, 1 FEMALE IS USUALLY SURROUNDED BY SEVERAL MALES *1187,5324*. INCREASED WATER TEMPERATURE RESULTS IN A DECREASED INCUBATION PERIOD. A SOUTH CAROLINA STUDY, FOUND THE SMALLEST MATURE MALE TO BE 1 YEAR OLD ALTHOUGH MOST WERE MATURE AT 2 YEARS. ABOUT 23% OF THE FEMALES WERE MAT. AT 4 YEARS, 65% AT 5, AND 85% AT 6 YEARS *5654*. |BEHAVIOR: THIS IS A NON-TERRITORIAL MIGRATORY SPECIES *7667*. IN THE ATLANTIC, A SEASONAL MIGRATION OCCURS ALONG THE COAST WITH SPAWNING MIGRATIONS INTO FRESHWATER DURING THE SPRING *7667,1641*. IT IS NOT A STEADY FEEDER AND MEMBERS OF A SCHOOL NORMALLY FEED AT ABOUT THE SAME TIME. PEAK FEEDING TIMES ARE DAWN AND DUSK. SCHOOLING SPECIES ARE USUALLY THE DOMINANT PREY. THE YOUNG FEED NEAR THE BOTTOM ON CRUSTACEANS AND INVERTEBRATES *7667,8560,1641*. THEIR DEVELOPMENT IS RAPID, AND THE EGGS HATCH IN 48 HOURS AT 17 TO 21 DEGREES C *1641*. IN SOUTH CAROLINA, THEY SPAWNED IN THE DAYTIME AND AT NIGHT, AND 1 POPULATION SHOWED A SLIGHT PREFERENCE FOR SPAWNING IN THE DAYTIME *5392*. IN AN ILLINOIS LAB STUDY, FRY 9 TO 19 DAYS OLD REMAINED ACTIVE AND CONTINUED TO FEED AT NIGHT *5409*. FINGERLINGS FED AT A HIGH RATE IN AN ALABAMA CULTURE POND *6122*. IN A TENNESEE RESEVOIR, THE RELATIVE MORTALITY INCREASED WITH INCREASED STOCKING RATES *6104*. DISPERSAL FROM STOCKING SITES WAS RAPID *6104*. THIS SPECIES WILL SCHOOL AS ADULTS *1187,6172*, HOWEVER, JUVENILES EXHIBIT ONLY WEAKLY POLARIZED SCHOOLING BEHAVIOR *6172*. IN VIRGINA CULTURE PONDS, SCHOOLING OF FINGERLINGS WAS NOTED *5253*. THEY WILL HYBRIDIZE WITH WHITE BASS *5518*, AND THE SURVIVAL OF HYBRIDS IN A TENNESEE RESEVOIR WAS HIGH *5518*. ||LIMITING FACTORS: THE ADULTS HAVE FEW IF ANY PREDATORS IN INLAND POPULATIONS. THE YOUNG ARE VULNERABLE TO PREDATION BY THE ADULTS AND OTHER PISCIVORUS SPECIES *9685,7667*. THE AVAILABILITY OF FORAGE SPECIES MAY LIMIT THE POPULATION SIZE. THERE ARE NO NATURALLY REPRODUCING POPULATIONS IN ILLINOIS *9685*. |POPULATION PARAMETERS: THE SEX RATIO VARIES WITH LOCALITY, ALTHOUGH 90% OF THE INDIVIDUALS TAKEN IN COASTAL WATERS ARE FEMALES *7667,7933*. THE RATIO ON THE SPAWNING GROUNDS ARE AGE SPECIFIC WITH MALES DOMINATING THE YOUNGER AGE CLASSES *7667*. THEY LIVE ABOUT 12 YEARS, WITH YEAR CLASSES 3 TO 6 DOMINANT*7667*. THE GROWTH OF THIS SPECIES IS INVERSELY RELATED TO THE POPULATION DENSITY, AND CURVILINEARLY RELATED TO THE FORAGE CROP. THEY ARE FOOD DEPENDENT AT LOW FOOD AVAILABILITY, AND FOOD INDEPENDENT AT HIGH FOOD AVAILABILITY. THE ELEMENTS USED TO MODEL A BASS POPULATION IN A RESERVOIR INCLUDE: (1) A MINIMUM OF 25 POUNDS PER ACRE OF PREDATOR (BASS), (2) A MINIMUM OF 75 POUNDS PER ACRE OF PLANKTON FEEDERS (I.E., SHAD), (3) A MINIMUM OF 100 POUNDS PER ACRE OF BOTTOM FEEDERS (I.E., CATFISH). THE PRODUCTION OF THESE THREE FACTORS ARE CONTROLLED BY THE FERTILITY OF THE WATER, CLIMATE, WATER LEVEL FLUCTUATIONS, THE SHAPE OF BASIN AND SUBSTRATE COMPOSITION *1292*. THE BIOLOGICAL FACTORS WHICH INFLUENCE EARLY LIFE STAGES INCLUDE: (1) SIZE OF THE SPAWNING POPULATION, (2) PREDATION AND CANNIBALISM, (3) DISEASE AND FUNGI (IMPORTANT IN HATCHERIES, NOT IMPORTANT IN WILD POPULATIONS) AND (4) STARVATION (IMPORTANT IN HATCHERIES, NOT EVIDENT IN WILD POPULATIONS) *1155*. FACTORS USED TO ESTIMATE THE STANDING CROP OF BASS INCLUDE: (1) THE WATER DEPTH AND AREA OF WATERSHED AND AREA UNDERWATER, (2) THE FERTILITY OF WATER AND WATERSHED, (3) THE SPECIES COMPOSITION OF THE SYSTEM, (4) A

POPULATION ESTIMATE, (5) THE AVERAGE SEASONAL WATER TEMPERATURE AND (6) THE LENGTH OF THE GROWING SEASON *2643*. IN SOUTH CAROLINA, THE MALE:FEMALE SEX RATIO WAS 40:60 *5654*. THE ADULTS ARE COMMONLY FROM 5 TO 20 POUNDS, ALTHOUGH GROWTH IS QUITE VARIABLE, AND FEMALES GROW MORE RAPIDLY THAN THE MALES. A 7 YEAR OLD FISH FROM TAUM SAUK RESEVOIR WAS 28 INCHES AND 13.25 POUNDS. IN LAKE OF THE OZARKS, FISH STOCKED IN 1970 WEIGHED 3.75 TO 5.5 POUNDS AND WERE FROM 18 TO 22 LONG IN 1973 *1187*. IN SOUTH CAROLINA, THE GREATEST GROWTH IN LENGTH OCCURRED DURING THE 1ST 3 YEARS OF LIFE *5654*. IN A TENNESEE LAB STUDY, FLUCTUATING TEMPERATURES ENHANCED GROWTH RATE *5039*. |AQUATIC|TERRESTRIAL ASSOCIATIONS: PREDATORS OF THE LARVAE INCLUDE AQUATIC INSECTS, BLUEGILL, GREEN SUNFISH, CRAPPIE, FLATHEAD MINNOW, AND MOSQUITOFISH *795*. THE STRIPED BASS, MORONE SAXATILIS, IS A MARINE AND ESTUARINE SPECIES NATIVE TO THE ATLANTIC COASTAL REGION FROM CANADA TO FLORIDA, AND THE GULF OF MEXICO COAST FROM FLORIDA TO LOUISIANA (02:576). IT IS ANADROMOUS (EXCEPT FOR LANDLOCKED INTRODUCED POPULATIONS), TYPICALLY SPAWNING IN RIVERS JUST AHEAD OF TIDAL INFLUENCE (02:576). IN PENNSYLVANIA, THE STRIPED BASS IS NATIVE TO THE DELAWARE RIVER, ESTUARY, AND THE TIDAL TRIBUTARIES, AND THE SUSQUEHANNA RIVER (05:24;06:10). HOWEVER, IT IS DOUBTFUL THAT SPAWNING OCCURRED IN THE SUSQUEHANNA (00). STRIPED BASS HAVE BEEN INTRODUCED TO OTHER LAKES AND RIVERS IN THE STATE (07)."

R.MGT.A = "7667,9685"
R.MGT.E = "9685"
C.MGT = "THIS SPECIES IS STOCKED IN MISSOURI AS A CONTRIBUTION TO THE FISHERY AND TO UTILIZE GIZZARD SHAD*1187*. THEY ARE POPULAR FOR STOCKING SINCE THEY GROW RAPIDLY, ATTAIN A LARGE SIZE, AND UTILIZE ABUNDANT SHAD *6104*. IN THE SOUTHEASTERN U.S., STOCKING FINGERLINGS IS GENERALLY THE MOST SATISFACTORY METHOD *6111*. THEY MUST HAVE SUITABLE SPAWNING AREAS IF THE POPULATION IS TO BE SELF-SUSTAINING *5752*. IN A TEXAS RESEVOIR, WHITE BASS AND STRIPED BASS HYBRIDS GREW RAPIDLY AND HAD HIGH SURVIVAL. THE RECREATIONAL BENEFITS OF STOCKING HYBRIDS SURPASSED THE COSTS *5518*. WHITE BASS AND STRIPED BASS HYBRIDS HAD FASTER EARLY GROWTH AND HIGHER SURVIVAL THAN STRIPED BASS *5969*. AN OKLAHOMA POND CULTURE RECOMMENDED 1) PROVIDE AN ABUNDANCE OF COPEPODS EARLY IN THE SEASON, AND CLADOCERANS AND INSECT LARVAE LATE IN SEASON, 2) DELAY ADDING FORAGE FISH UNTIL THE STRIPED BASS ARE 4 TO 5 INCHES LONG AND 3) SOFT-RAYED FISH OF FUSIFORM BODY SHAPE ARE THE BEST FORAGE *5202*. IN ALABAMA, STRIPED BASS CULTURE IN CONTINUOUSLY AERATED PONDS PRODUCED 2.4 TIMES THE NUMBER OF FINGERLINGS PRODUCED BY CONVENTIONAL METHODS *5527*. IN OKLAHOMA, PLANKTON WAS USED AS FOOD IN THE HATCHERY PRIOR TO RELEASE INTO CULTURE PONDS *5640*. IN ALABAMA, THE BEST RESPONSE TO FEEDING WAS OBTAINED WHEN THE SURFACE WATER TEMPERATURE WAS GREATER THAN 10 DEGREES C. THE AVERAGE SURVIVAL, MEAN PRODUCTION, AND FOOD CONVERSION OF FINGERLINGS WERE BEST AT THE FOLLOWING FEEDING RATES: 10% OF BODY WEIGHT JULY 7TH TO THE 31ST, 7% OF BODY WEIGHT FROM AUGUST IST THROUGH THE 31ST, 6% OF BODY WEIGHT FROM SEPTEMBER 1ST THROUGH THE 30TH, AND 5% BODY WEIGHT FROM OCTOBER 1ST TO THE 31ST *6122*. IN OKLAHOMA, STRIPED BASS PREYED ON TROUT AFTER TROUT STOCKING *5065*. AN ILLINOIS STUDY CONCLUDED THAT STRIPED BASS ARE WELL-SUITED TO BE A POND REARED FOOD FISH *5973*. ONE STUDY RECOMMENDED MANAGING ONLY THE DOMINANT YEAR CLASSES TO OPTIMIZE YIELDS *5033*."
